

Research Interests

PARTICIPANTS' AREAS OF RESEARCH AND TECHNICAL WORK

*	Committee Member
**	Speaker

*Hitoshi Isahara**, NICT

Hitoshi Isahara is interested in natural language processing and lexical semantics, as well as their application to machine translation. He has developed several huge linguistic resources, such as the Corpus of Spontaneous Japanese and the Japanese Learner English Corpus, as a basis of such studies. Now he is attempting to apply them to the field of cognitive science aimed at simulating associative process by humans.
