

Polymer-Stabilized Liquid Crystalline Blue Phases for Display

Prof. Hirotugu KIKUCHI (Kyushu University)

1. TFT LCD Technology Load Map (Samsung)

- High response LC material is needed in Next generation TFT-LCD.

LCD Tech.	PVA	→	s-PVA	→	New X mode	→	Blue phase mode
Response time	16ms	→	8ms	→	4ms	→	1ms
TFT	a-Si (Al)	→	InGaZnOx (Cu)				
Flame Freq.	60Hz	→	120Hz	→	240Hz	→	480Hz
Resolution	HD	→	FHD	→	UD	→	SD
Display size	40 inch	→	52	→	70	→	82
	2000	2004	2008	2010	2012		(reported by Jun H. Souk (Samsung))

2. Comparison of conventional liquid crystals and our blue phase materials

	Polymer-stabilized blue phases	Conventional Nematics
Molecular alignment		
Optical property		
Surface treatment	Unnecessary	necessary
Response time	< 1 ms	several ms
Temperature range	$\Delta T = 1\text{--}2K$	

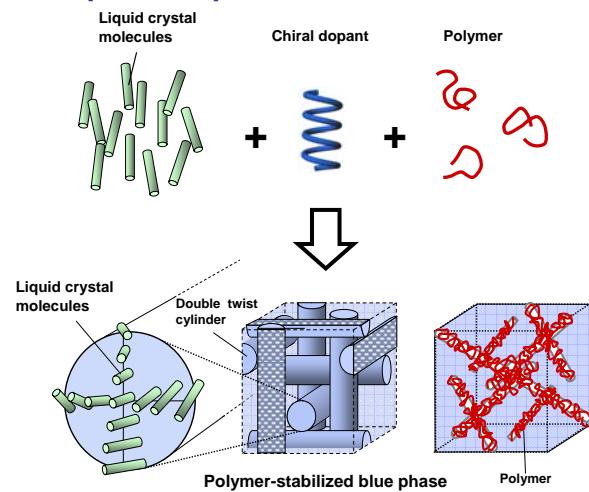

- Blue phase has two major advantages over commonly used nematic phases in LCD.
- However, blue phase so far appears in a very narrow temperature range ($\Delta T \sim 1K$)

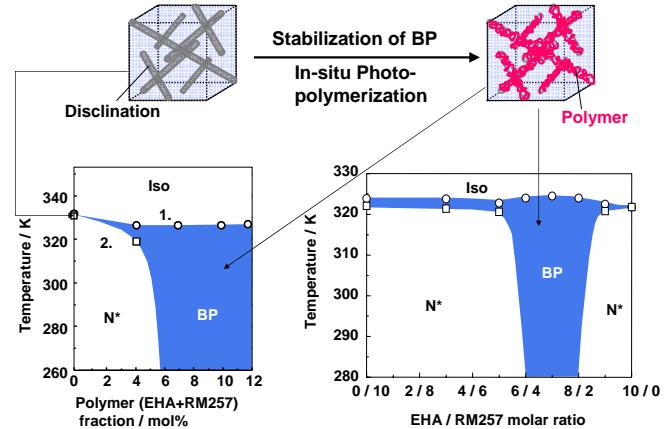

Our polymer-stabilized blue phases are allowed to expand temperature range ($\Delta T > 100K$).

3. Polymer-stabilized blue phases

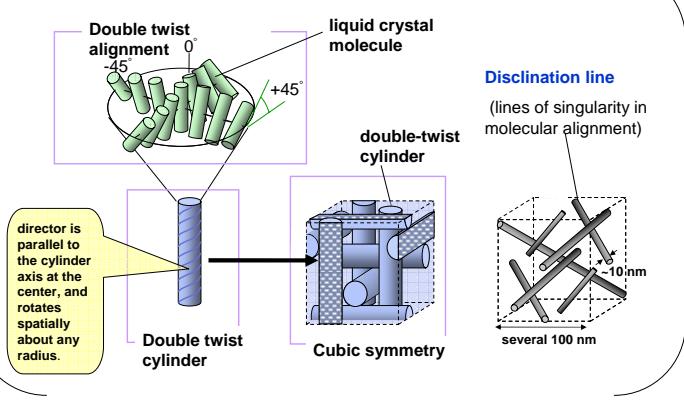

- Composition profile

- Data of expanding temperature range

Structure of BP

4. Patent status & Patent owner contact

- Patent license is available.

Patent No. : WO2005-090520, JP3779937

Apply country : JP, US, CA, EP, KR, CN, TW

Patent owner contact: Masaru OZAKI (JST)
