

Presentation Title : **Stream restoration project in Kamisaigo river**

*[Hironori Hayashi]
[Assistant Professor]
[Kyushu University]*

Abstract :

Stream restoration project is now on going in Kamisaigo river in Fukuoka. The workshop and stream restoration design has been run by our laboratory. We also conduct project based research to innovate the river planning method, such as how to restore riffle and pool habitat in small urban stream, how to make good consensus with residents.

One of my roles in river restoration workshop is facilitator. We discussed from general shape of the stream to detail design of revetment form using landscape model. The workshop is still going on to discuss how to maintain the stream, how to conduct some events in the river and so on.

Landscape change between before and after restoration
