The fifth paradigm of science : Automation

Robotic Biology Prototyping Laboratory

Robotic Biology

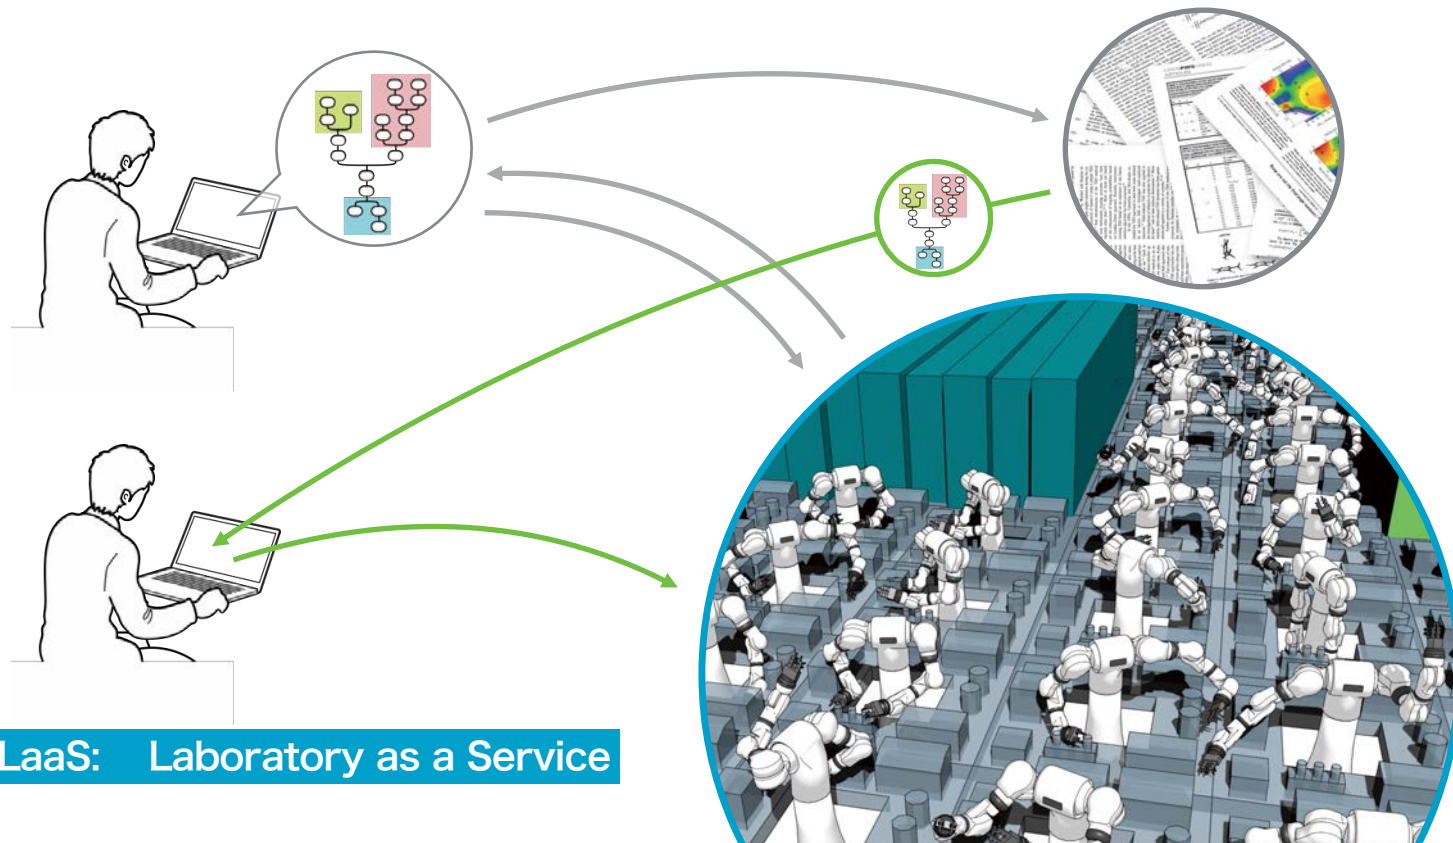

- Lab experiments as programming of physical and chemical processes
- Robots in the cloud execute actions and acquire data

JST MIRAI

Flexibility for protocol changes

Cell culture

Proteomics
Metabolomics

Genomics

Consortium

Robotic crowd biology with Maholo LabDroids

Nozomu Yachie, Robotic Biology Consortium & Tohru Natsume

*Robotic Biology Consortium

Steering Group: Nozomu Yachie¹⁻⁴, Koichi Takahashi^{3,6,7}, Toshiaki Katayama⁸, Takeshi Sakurada⁶, Genki N. Kanda^{6,7}, Eiji Takagi⁶, Takako Hirose⁶, Tatsuo Katsura⁹, Tetsuo Moriya⁹, Hiroaki Kitano¹⁰⁻¹³, Junichi Tsujii^{14,15}, Tohru Natsume^{5,6}

Robotics Group: Tomoyuki Shiraki¹⁶, Hirokazu Kariyazaki¹⁶, Motohisa Kamei¹⁶, Noriko Abe¹⁶, Takuya Fukuda¹⁶, Yukiko Sawada¹⁶, Yukio Hashiguchi¹⁶, Kenji Matsukuma^{6,16}, Shinji Murai^{6,16}, Naoyuki Sasaki⁶, Tatsuro Ipposhi^{6,16}, Hideo Urabe^{6,16}, Taku Kudo^{6,16}, Makoto Umeno¹⁶, Seiki Ono¹⁶, Kohei Miyauchi¹⁶, Miki Nakamura¹⁶, Takahiro Kizaki¹⁶, Takashi Suyama¹⁶, Tomohisa Hatta⁵, Tohru Natsume^{5,6}

Information Technology Group: Tazro Ohta¹⁷, Koichi Takahashi^{3,6,7}, Yosuke Ozawa⁶, Takeshi Sakurada⁶, Kenji Matsukuma⁶, Shinji Murai⁶, Shoji Ihara¹⁸, Satoshi Tamaki¹⁸, Erick Antezana¹⁹, Alexander Garcia-Castro²⁰, Jean-Luc Perret²¹, Soh Ishiguro^{1,3}, Hideto Mori^{1,3}, Daniel Evans-Yamamoto^{1,3}, Nanami Masuyama^{1,3}, Masaru Tomita³, Junichi Tsujii^{14,15}, Toshiaki Katayama⁸, Hiroaki Kitano¹⁰⁻¹³

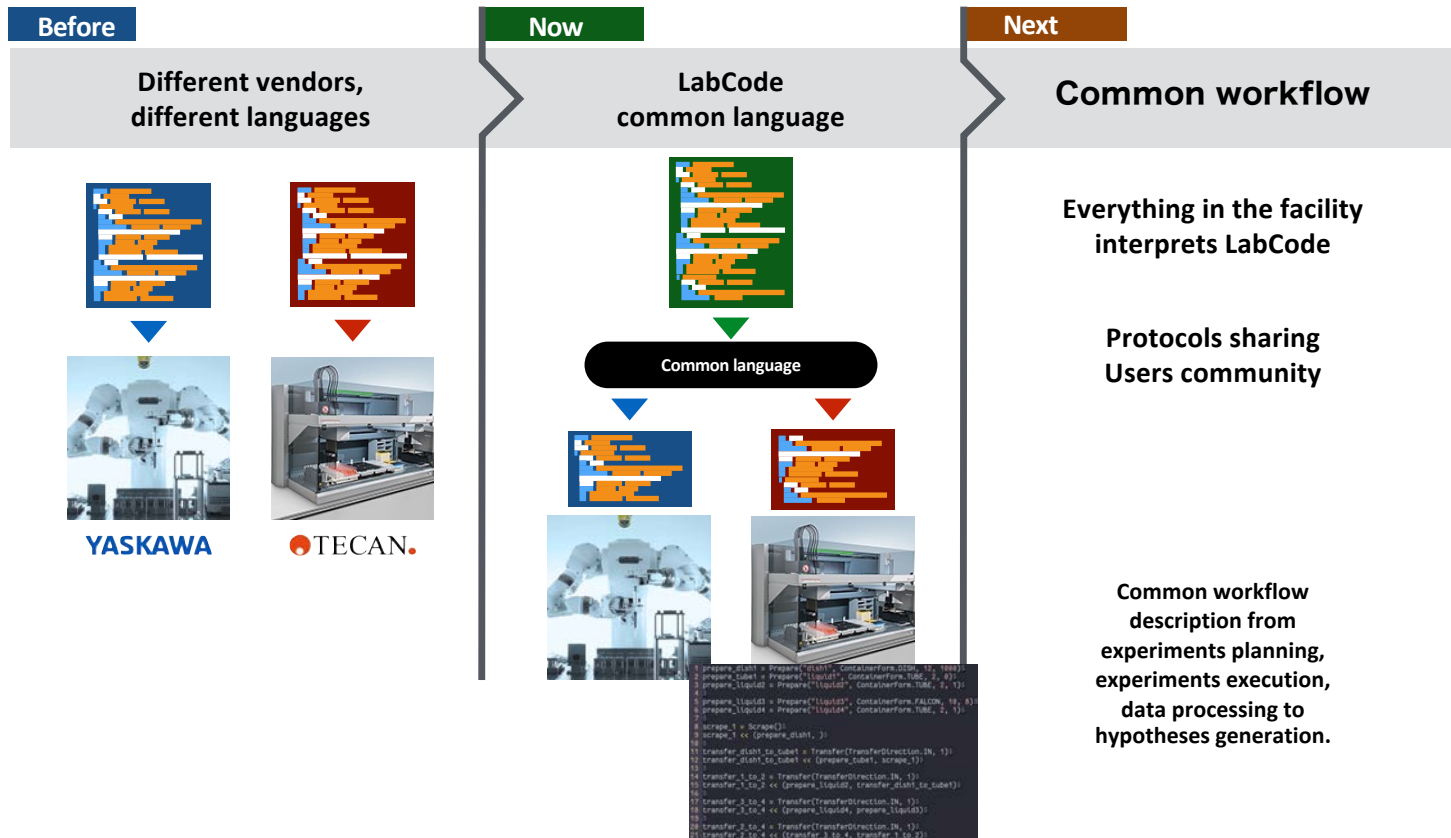

Proteomics Group: Tomohisa Hatta⁵, Masaki Matsumoto²², Hiroshi Nakayama²³, Ayaka Tokunaga²⁴, Kazutaka Shimbo²⁵, Naoyuki Yamada²⁴, Keiichi I. Nakayama^{22,25}, Tohru Natsume^{5,6}

High-Content Cell Screening Group: Takatsune Shimizu^{26,27}, Hideyuki Saya²⁷

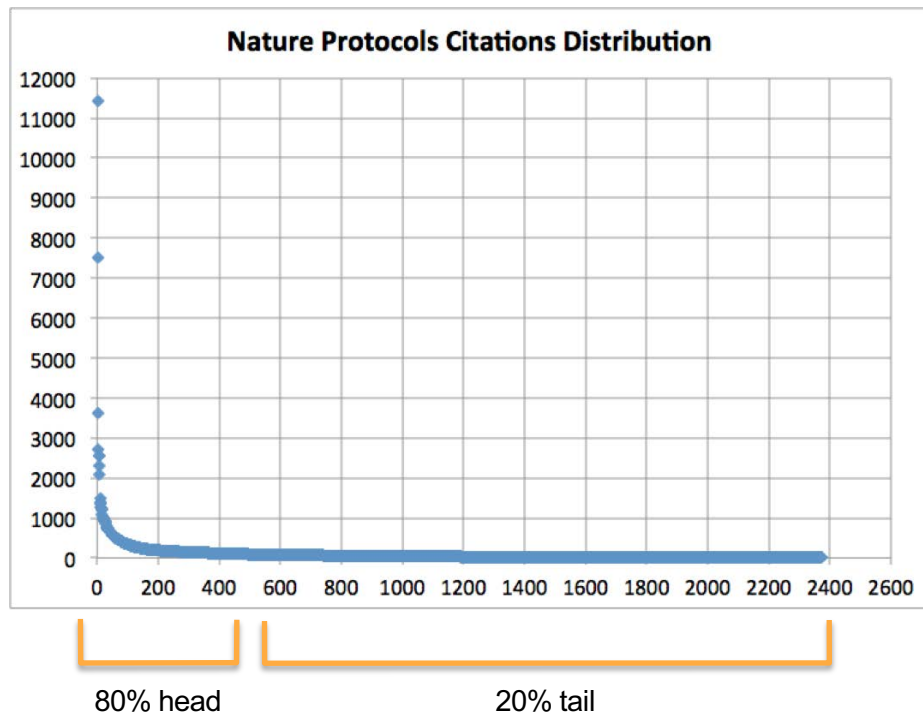

Epigenetics Group: Satoshi Yamashita²⁸, Takahide Matsushima²⁸, Hiroshi Asahara²⁸

Clinical Group: Hidetoshi Eguchi²⁹, Manabu Mikamori²⁹, Masaki Mori²⁹

LabCode: experimental protocol description language

Pareto principle at work; citations distribution in Nature Protocols

Top 1 0 0 : 4 4 %、5 0 0 : 8 0 %

Data by Ozawa *et al.* (Epistra Inc.)

Major automation burdens in biology

Thousands of different protocols

Frequent protocol changes

Lots of tacit knowledge

Current laboratory automation is not really lab automation

Status quo: machines do not know each other

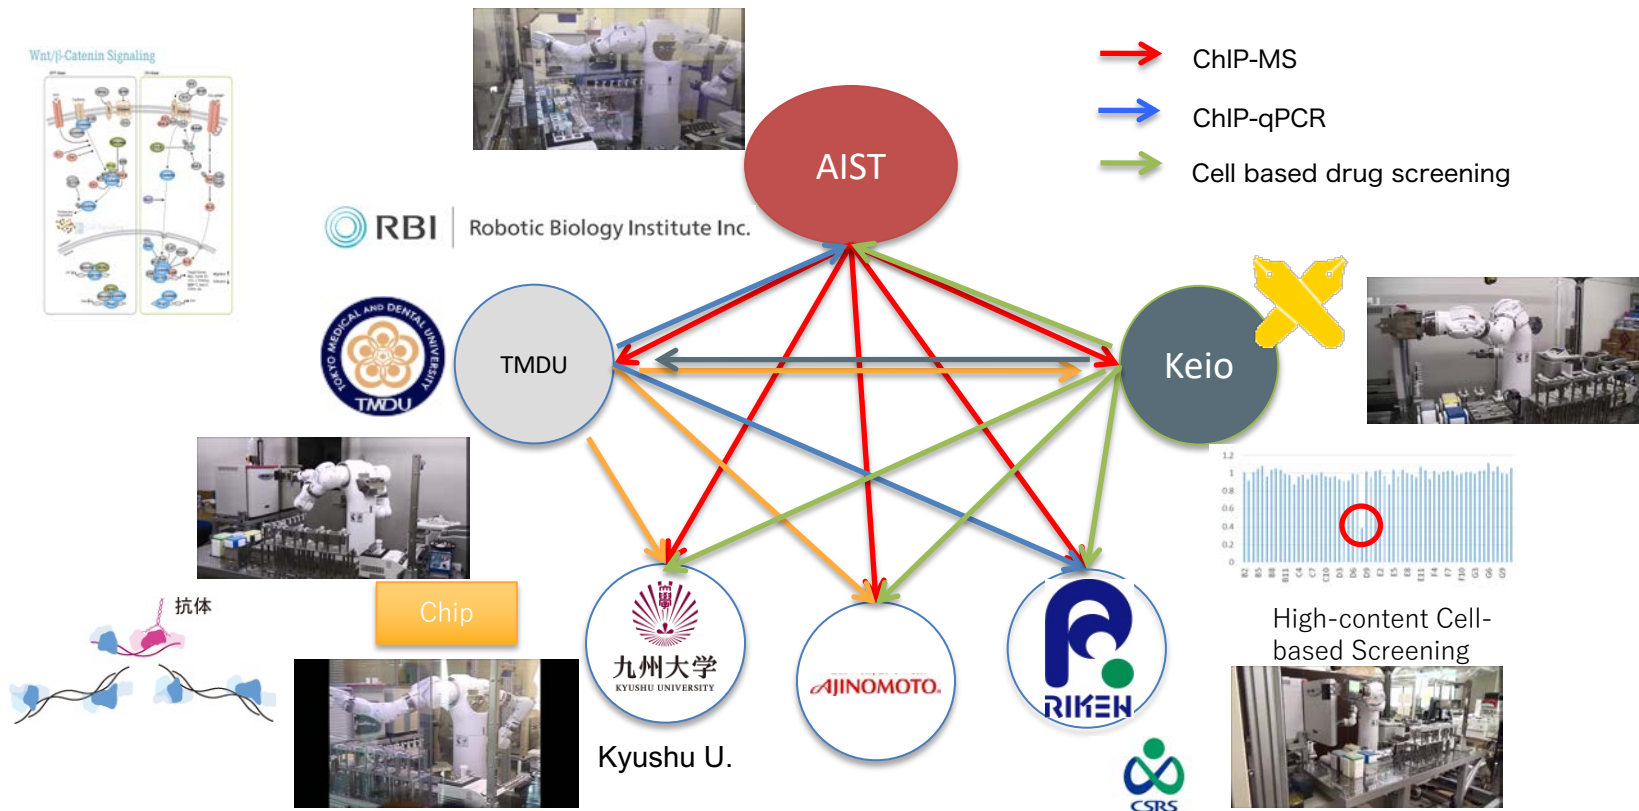

To be: machines work together

Protocols exchange between six robot labs

A remote experimentation PoC

Autonomous passage culture

-- A minimum prototype of AI-driven life science

Execution
(robot)

Recognition
(ML)

Closed-loop

Automated microscope
(thermo fisher EVOS)

Decision making
(rule-based)

Cell state prediction
(model based)

$$N_n = \frac{(1+a)N_n a}{1+bN_n a}$$
$$= e^{r\Delta t} - 1 \quad b = \frac{a}{K}$$

Operation started in Jan. 2020

→ helped protecting precious cell samples under COVID-19 lab-shutdown.

- A closed-loop, autonomous system
recognition – prediction
- decision making - execution

- HEK293 cells
(also works with iPS cells)

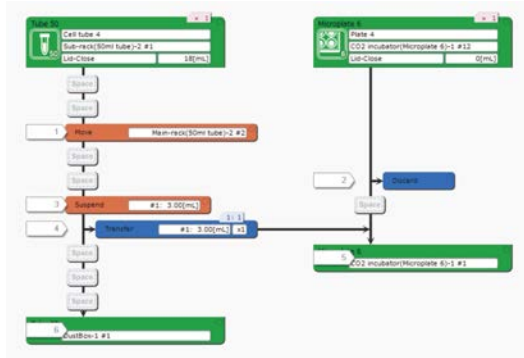

- Minimizes human labor

Implementing tacit knowledge

1. Programming

By robot engineer

2. Modifications and adjustment

By lab expert

before

after

3. AI optimization

- Machine learning of lab expert's evaluation criteria
- Evaluation function is used in Bayesian optimization

Under development: motion capture

More efficient implementation of step 1 and 2.

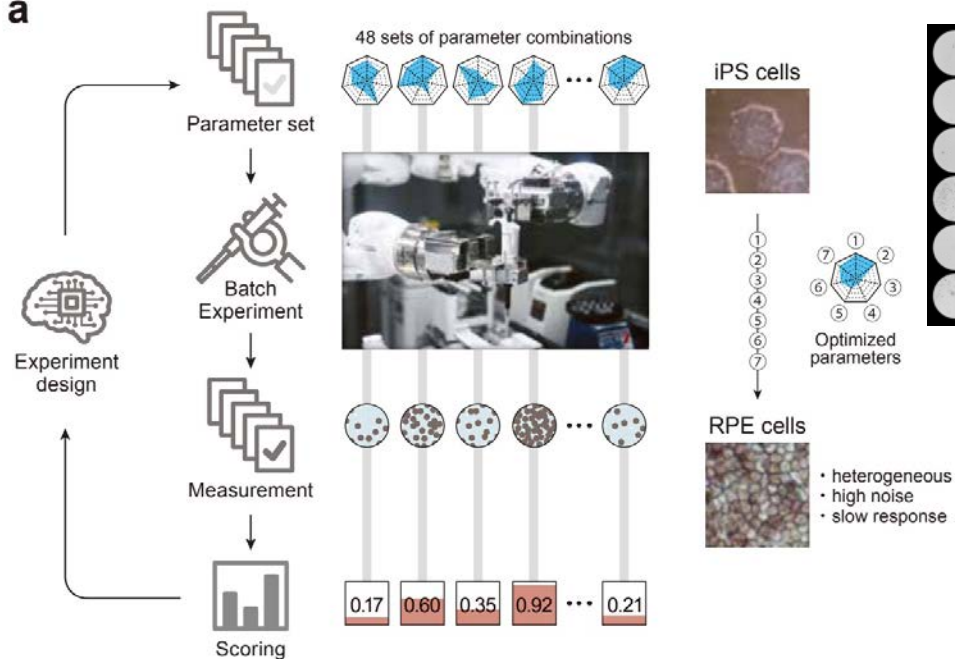

Direct generation of robot trajectory.

Autonomous induction of clinical-grade RPE cells from iPS cells

(RPE: Retinal Pigment Epithelium)

Epistra Inc.

a

Automated experiments planning :

A new method for noisy, highly parallel, and cost- and time-consuming biological experiments (a variant of batch Bayesian optimization)

Round 5+7 Parameter vs Score: Visualization

Type: Circle

→ 10x acceleration of research process (five years to a half year)

Towards the fifth paradigm of science
