

Data-centric service platform connecting heterogeneous systems

Project Leader : Takahide MATSUTSUKA
Director, Digital Business Platform Unit, FUJITSU LIMITED

Summary :

Society 5.0 envisions to connect real-world people, things and events beyond the space and time boundary through data. We hypothesis its foundation should be data-centric service platform. To develop and verify the required technologies and build business models in the main-stream research phase to enable this, we'll define the reference architecture, identify the technologies and their research issues, and build the appropriate research team. We'll also analysys the issues from the real field examples throughout the research phases and feed their result back to the research and development.
