

# Creation of "humane service" industries

**Personal activity metrics (PAMs) : Health management by walking**

**Project Leader :** Yasushi YAGI, Professor, Osaka University

**R&D Team :** Osaka University

## Summary :

It is greatly desired to extend a Healthy life expectancy by detecting a disease sign and by preventing a disease in advance, not only here in Japan but also in the world wide. As one of solutions to the healthy life span extension, we develop a health metric "Personal Activity Metric (PAMs)" which enables us to estimate a health status, a disease risk, a physical capacity, an injury risk of a target person only from his/her walking images. We will also create health monitoring services based on the health metric measurement.
