

Creation of "humane service" industries

Development of functional space that can automatically promote health

Project Leader : Masashi KATO
Professor, Nagoya university Graduate School of Medicine

R&D Team : Nagoya Institute of Technology

Summary :

We will first select a special stimulus (health promotion stimulus) that contribute to health promotion with improving work efficiency based on scientific evidence. We will use the stimulus in the vehicle for ①prevention of motion sickness and ②prevention of economy-class syndrome. We will then use the stimulus in the houses and workplaces for ③prevention of slip and fall accidents, ④improvement of working efficiency, ⑤prevention of intolerance to cold, ⑥prevention of bedsores, ⑦ prevention lifestyle-related diseases and ⑧cosmetic impacts. We will also use the stimulus in the athletic facilities for ⑨improved sports performance with preventing accidents. Thus, we will create a valuable space to achieve the above (①-⑨).
