JST-Mirai Program (Small-start type)

FY2022 Application Guideline

Application period

From Wednesday, March 30, 2022

to Wednesday, May 25, 2022

12:00 (noon, Japan time)

Note: This translation is provided as a reference material. If there is any discrepancy between this translated version and the original Japanese version, the original Japanese version prevails.

Department of R&D for Future Creation March 2022

<Overview of the Call>

(1) Solicitation and Selection Schedule

R&D proposal acceptance begins	Wednesday, March 30, 2022
Application deadline (Deadline for submitting applications through the e-Rad system)	12:00 noon (Japan time) on Wednesday, May 25, 2022
Document screening period	Early July to Late July
Interview screening period	Late July to Early August
Notification/announcement of selected projects	September or later
R&D project begins	October or later

* The dates are subject to change.

* The briefings for solicitation (only in Japanese) are held online in consideration of the new coronavirus disease (COVID-19) outbreak.

For more details, please see the Mirai Program open-call website (hereinafter referred to as "open-call website")

- * Please be sure to check the open-call website for the latest information on how to apply.
- * Applications through e-Rad will be accepted from Wednesday, April 13, 2022. The start of application submission will be announced on the open-call website.
- * Specific interview selection schedule will be determined by JST.
- * As soon as determined, the document screening and the interview selection schedule will be announced on the open-call website:

Mirai Program open-call website: https://www.jst.go.jp/mirai/en/open-call/research/r04/index.html

(2) Application method

Proposals should be submitted via the e-Rad system (https://www.e-rad.go.jp/en/; see Chapter 5 "Submission via the Cross-ministerial R&D Management System (e-Rad)."

As the application deadline approaches, heavy traffic on the e-Rad system could cause delays. Please give yourself enough time to complete the submission.

If the application procedure has not been completed via e-Rad by the deadline, the proposal will not be accepted for any reason.

Please make sure the description of e-Rad and the proposal text regarding the institution/position (in case of discrepancy, the statement in the proposal text will be treated as correct.) coincide with each other. Please note that if the proposal uploaded on e-Rad has any deficiencies that make it difficult to review, it will be rejected. The "Deficiency of review difficulty" includes mistakes in the proposal form (using forms from different years), incompletion in each proposal form (especially, Form 1: proposal cover), and serious omissions in the items described in the proposal. If garbled characters make peer review difficult, JST may contact you to confirm the contents.

In addition, JST will not be responsible for any incomplete proposals, regardless of whether the proposal is accepted or rejected. Therefore, please be advised that JST will not correct the proposal after confirming with the R&D applicant, or request the R&D applicant to make any corrections by the application deadline.

(3) R&D Themes for which proposals will be solicited

R&D themes for FY2022 are as follows:

R&D Type	R&D Mission Area		
	 "Advanced Intelligent Information Society" (Program Officer: MAEDA Eisaku) Human-centric Digital Twins Services Utilizing AI, Big Data and IoT "New Social Challenges" (Program Officer: TAKAHASHI Keiko) Sustainable and resilient social system for healthy nature 		
Small-start Type (Feasibility study)	"Society Optimized for Diversity" (Program Officer: WAGA Iwao) Assistance and evaluation for enhancing human relationships		
	 "Low Carbon Society" (Program Officer: HASHIMOTO Kazuhito) Realization of a low carbon society through game changing technologies 		
	 "Common Platform Technology, Facilities and Equipment" (Program Officer: OSAKABE Nobuyuki) Realization of common platform technologies, facilities and equipment that create innovative knowledge and products 		

<Researchers Considering Applying for / Participating in the JST Program>

1. Contribution to achieving Sustainable Development Goals (SDGs)

JST contributes to achieving sustainable development goals (SDGs)

At the UN Sustainable Development Summit held in September 2015, the outcome document **"Transforming Our World: the 2030 Agenda for Sustainable Development"** was unanimously adopted. The outcome document focuses on Sustainable Development Goals (SDGs) as the more comprehensive new global action targets for humanity, the planet and prosperity. The 17 goals of the SDGs not only indicate challenges on sustainability faced by the humanity, but also require these challenges to be solved in an integrated and inclusive manner. To this end, it is hoped that innovation in science and technology will solve these social issues and provide a scientific basis for making better policy decisions. These roles agree with the new responsibilities of science, i.e., "Science in Society and Science for Society" set forth in the "Declaration on Science and the Use of Scientific Knowledge" (Budapest Declaration*) adopted by the International Science Council in 1999. As a core organization promoting Japan's science and technology policy, JST promotes cutting-edge basic research and is engaged in problem-solving R&D to meet the needs of society. SDGs are universal goals that can cover JST's entire mission. JST will co-create values with industry, academia, government, and the public through its projects, and work with researchers to achieve a sustainable society.

HAMAGUCHI Michinari

President, Japan Science and Technology Agency (JST)

- * The Budapest Declaration states that "Science for Knowledge," "Science for Peace," "Science for Development" and "Science in Society and Science for Society" are the responsibilities, challenges and obligations of science in the 21st century.
- See the website below for Sustainable Development Goals and JST's approaches: https://www.jst.go.jp/sdgs/actionplan/index.html (Japanese) https://www.jst.go.jp/sdgs/en/actionplan/index.html (English)

BUSTAINABLE GOALS

2. Promotion of diversity

JST Promotes Diversity!

Diversity is an essential requisite for promotion of scientific and technological innovations. It is possible to open a new perspective on science and technology through collaboration and discussion among various stakeholders having different specialties and values, irrespective of gender and nationality. JST, by promoting advances in diversity in its all activities in science and technology, is addressing possible problems of our future society, contributing to the strengthening of industrial competitiveness of Japan as well as to human well-being. Our activities in this field are in accord with the "Sustainable Development Goals (SDGs)" agenda of the United Nations, in which goals relevant to diversity advancement are shown, including gender equality, contributing to efforts on our domestic problems but also to those on problems common to various countries.

Currently, the active participation of women in various fields is considered as the central part of the growth strategy as "the largest potential in Japan." In the R&D sector, extensive participation of female researchers is also substantially important, and indispensable to supporting science, technology and innovation. JST expects the active participation of female researchers in this open call. JST is constantly making efforts for institutional improvement, for example, the improvement of our "Childbirth, Child-raising and Nursing Care Support System" to provide an environment in which a researcher on leave can return to his/her research project based on the voice of the system user.

The new research proposals are also examined from a viewpoint of diversity.

Dear researchers: We look forward to receiving R&D proposals from as many of you as possible.

HAMAGUCHI Michinari President, Japan Science and Technology Agency (JST)

We Are Waiting for Your Application!

JST is promoting diversity in research, based on our perspective that diversity is about understanding other researchers that have ideas different from yours, and creating new values by combining your ideas. Diversity thus has the potential to solve not only domestic problems but also problems common to all nations across the world. Therefore, JST is addressing large-scale social challenges such as the Sustainable Development Goals (SDGs) through the promotion of diversity in research and collaborating with foreign institutions.

JST is promoting diversity by encouraging the activities of female researchers, of course young researchers, and researchers with foreign citizenship. To ensure that each researcher is fully able to exercise his/her skills, JST is providing continual support for childbirth, childcare, and homecare of elderly relatives, and also endeavoring to maintain a balanced membership composition in committees and other groups. JST especially welcomes the application of female researches to our program, from whom we did not have so many research proposals in previous years, to realize environments where various kinds of researcher can work, cooperate and compete with each other. Through these activities, JST is pursuing the creation of new values.

We are looking forward to your applications - especially those from female researchers.

WATANABE Miyoko Deputy Executive Director, Japan Science and Technology Agency (JST) Director, Office for Diversity and Inclusion 3. Towards the promotion of fair research

Towards the Promotion of Fair Research

Recent incidents involving misconduct and dishonesty in research activities have resulted in an alarming situation that threatens the relationship of trust between science and society, and hinders the healthy development of scientific technologies. To prevent misconduct in research activities, there must be a concept of self-purification in the scientific community. Each researcher must strictly adhere to discipline and work to create new knowledge and inventions that are useful for society, based on high moral standards that meet the expectations of society.

As a funding agency for research, JST considers research misconduct to be a grave issue and makes every effort to prevent it in cooperation with relevant organizations, with the goal of regaining public trust.

- 1. JST believes that honesty in research activities is extremely important for Japan, which seeks to develop itself through science and technology.
- 2. JST supports honest and responsible research activities.
- 3. JST strictly condemns any misconduct in research activities.
- 4. JST will promote education in research ethics and reform its research funding programs in cooperation with the relevant organizations in order to prevent misconduct.

We must develop a healthy scientific culture based on social trust, so as to build a society filled with hopes and dreams for a bright future. We therefore request the continued understanding and cooperation of the research community and related institutions.

HAMAGUCHI Michinari President, Japan Science and Technology Agency (JST)

Chapter 1 JST-Mirai Program

1.1 Overview of JST-Mirai Program

The JST-Mirai Program (hereinafter, Program) aims to promote high-risk, high-return "backcasting" research and development (R&D) that leads to social and economic impact. For that purpose, this program helps develop proof-of-concept (POC), so that investors and industry may judge practical application feasibility. In this program, the project sets technologically challenging goals based on basic research results and turns innovative ideas into commercial and social values for the future society.

The Program consists of two different project approaches: "Small-start Type" and "Large-scale Type." (Open call in 2022 is only for "Small-start Type)"

"Small-start Type"

In this type, project begins with feasibility study at a relatively low budget (small start) and then is scaled up to full R&D project through the stage-gate evaluation. During the feasibility study, the project explores the social and economic potential of the ideas toward a full R&D project. Then, stage-gate evaluations are conducted ^{Note)} to determine the transition from feasibility study to full R&D project. Projects are called for based on the "prioritized theme" set by JST according to R&D mission areas set by the Ministry of Education, Culture, Sports, Science and Technology (MEXT).

• "Large-scale Type"

For the "Large-scale Type", MEXT identifies "technology theme" based on various analysis of science, technology and innovation policies. R&D project is seleced according to the "technology theme" that may change existing technology systems and become platform technologies for the future.

Aiming to develop the POC, the Program evaluates social and economic impact and collaboration with the private sector at the stage-gate evaluation, in addition to the progress of R&D as the scientific excellence.

Note) Stage-gate evaluation: An evaluation process that divides the R&D period into multiple stages and decides whether to continue for the next stage.

1.2 Management system for the JST-Mirai program

In the Program, the Program Director (PD) supervises the overall program management, and the Program Officer (PO) is responsible for managing each of the R&D mission areas or the "Large-scale type" (see the figure below).

The PD convenes the Program Director committee (PD committee) with experts when overseeing the program operation from a bird's eye view. The PD committee reviews the important management matters for the Program and determines basic policies of the Program, prioritized themes and technology themes, project candidates, full R&D projects selected at the stage-gate

evaluations and so on.

The PO convenes the R&D management committee for overseeing the operation of the mission area, etc. from professional perspectives. Each R&D management committee selects prioritized theme candidates for the "Small-start Type", selects project candidates for each prioritized theme after calls for proposals, reviews progress of projects via site visits and reports, provides advice to the projects, and conducts stage-gate evaluations. The committee also determines the project budget, merges projects, and revokes projects (early termination) through review.

Fig. Management System of the JST-Mirai program

1.3 Purpose and characteristics of JST-Mirai Program

The rapid development of digital technologies and progress in open innovation has changed worldwide social and economic trends to create innovation. Japan is also at this great turning point. The JST-Mirai Program is launched as a driving force for turning strategic R&D into innovation and creating new values.

JST designs the Program to promote realization of an "innovation ecosystem" that lead to solve social and industrial issues and to create new industries. For that purpose, we continute to strengthen our collaboration with the government, universities, and industries and to challenge high-risk, high-return R&D together for creating tomorrow's innovation.

(1) Creating "new value" based on prioritized themes or technology themes

•Themes for collaboration among various fields and organizations

The prioritized themes and technology themes are set to encourage integration of various disciplines and collaboration with various stakeholders for social implementation. These themes are also designed to realize values for multiple social and economic issues.

R&D proposals of the Program are called by taking these points into consideration.

(2) Operation of the R&D project

•Management by R&D Supervisors (Program Officers: POs)

Each PO of the prioritized theme explains own policies for selecting and managing projects. Please read "Chapter 6 Prioritized Theme for Research Proposals" (https://www.jst.go.jp/mirai/jp/uploads/application-guideline-r04-c6-en.pdf).

PO coordinates the project teams and others for realizing R&D portfolio of the prioritized themes of each mission area.

•Conducting stage-gate evaluation

The JST-Mirai Program conducts a "stage-gate evaluation" during the R&D period to determine whether the R&D project could continue or not based on the viability of reaching the POC. Research papers and patents are considered as parts of evidence for verification at the stage-gate evaluation.

Be sure to see, "3.3 Evaluation" for the stage-gate evaluation of the "Small-start Type" R&D project.

Maximizing the results

In the JST-Mirai Program, the R&D project may conduct basic research to solve issues raised during the project period, revise the teams (e.g. adding new R&D institutions), incorporate new technologies and findings, respond to changes of social and economic needs, spin out the results of some R&D, collaborate with other organizations and take ELSI (Ethical, Legal and Social Issues) and RRI (Responsible Research and Innovation) into consideration. PO reviews progresses in detail for maximizing the results of the R&D projects.

•Change in Principal Investigator (PI) of the R&D project

The R&D project may focus more on applied R&D according to its progress toward social and economic implementation. It is, therefore, possible to change the PI during the R&D project to keep its optimal management.

(3) Promoting Industry-Academia Collaboration

Intellectual Property Management Basic Policy

PI must make sure that R&D results could lead to creation of social and economic values by obtaining intellectual property rights effectively, securing know-hows and maintaining reliability and superiority of the R&D results. For this purpose, JST summarizes basic policies common to the Program as an "Intellectual Property Management Basic Policy," which could help align R&D activities with intellectual properties, obtain rights and determine integrated policies on open and closed strategies for utilization of the R&D results.

In the Program, PI must establish the mutual agreement called "Joint Intellectual Property Agreement" (hereinafter Joint Agreement) which complies with the basic policies agreed with participating organizations and researchers. A copy of this Joint Agreement must be submitted to JST and the PO within six months after project starts. If the Joint Agreement is not concluded, the participation of the R&D institution may be cancelled, or the R&D project may be suspended.

The basic policies are provisionally translated to English. See below for contents and details.

https://www.jst.go.jp/mirai/en/open-call/research/r04/index.html

(4) Responsibilities of Principal Investigators (PIs) and their institutions

• Proposed POC to implement innovative ideas and benefit to the society

PI proposes a project to develop the POC that could contribute for achieving the prioritized theme of the "Small-start Type" or technology theme of the "Large-scale Type". The proposed project and POC should be based on the social and economic issues identified to achieve the prioritized theme or technology theme and consider any ripple effects raised when the POC is implemented to the society and economy. Milestones are also included for development of the POC to pursue the project.

Upon evaluation and coordination with PO, PI may set the POC and concrete milestones of his/her project and then conducts feasibility studies R&D to achieve these. During the project period, PI may undertake revision of his/her R&D plans and teams (including addition of new team members) if such revisions are accepted by the PO.

Institutional support

The R&D institution is requested to provide any support necessary for developing the POC of the R&D project; for example, assigning personnel to support PI and own R&D management, organizing an intellectual property management committee for creating, protecting and utilizing intellectual property rights (see "(3) Promoting Industry-Academia Collaboration"), and supporting collaboration among R&D institutions and other stakeholders.

Active participation of young researchers

The R&D project is expected to involve a wide range of academic fields and integration of the humanities and science, and to encourage diversity of the R&D project participants. Since many prominent researchers conducted the basic research at the young ages leading to the world-class excellent outcome, young researchers are expected to participate actively and take major roles in the R&D projects. It is, therefore, recommended that PI invites young researchers for the proposed R&D project as well as young researcher from industry, academia, and government proposes his/her own R&D project.

(5) R&D diversity

In the research area, it is increasingly important to design research methods and designs with biological, socioeconomic, or even psychological differences. The "6th Science, Technology, and Innovation Basic Plan" states that an all-inclusive society must be realized, so that the JST-Mirai Program encourages R&D that incorporates perspectives on gender, age, and other aspects of diversity in order to realize a future society with improved diversity. For proposals that may require consideration for diversity in research methods and plans, please specify the details in the proposal. In addition, we expect that the R&D implementation structure will have a diverse membership to maximize results.

1.4 Overview of the "Small-start Type" R&D Project

- R&D project is conducted through the leadership of the Project Leader (PL; equivalent to PI) with flexible management by PO in the relevant mission area.
- R&D project proceeds stepwise. First, feasibility studies are performed with a relatively a small amount of budget (small start). During the feasibility study, a variety of new ideas are called for and examined the feasibility of these ideas. Then, a full R&D project is selected with more budget and research period to develop the POC.
- Stage-gate evaluation is carried out at the end of feasibility study. Considering the nature of the program, not only scientific progress but also collaboration with the private sector is verified at the stage-gate evaluation. When the R&D project is successfully scaled up to full R&D project, the R&D activities should be accelerated to realize the POC by strengthening its teams, collaboration with stakeholders and so on.
- During the feasibility study, in addition to examining and verifying feasibility of the ideas to tackle technological bottlenecks, the full R&D project plan should be prepared and the proposed POC should be clarified according to "3.3 Evaluation".
- R&D project may be merged with another one if it seems to complement each other for realizing the POC.

R&D team

PL must organize own R&D team that enable to develop the POC of the R&D project.

- a. PL leads own group and is also able to organize a group ("Joint R&D group") consisting of researchers from other R&D institutions or private sectors, if necessary, for exploring R&D ideas. Please note A proposal by an individual is allowed.
- b. PL needs to identify co-Principal Investigator(s) who leads the "Joint R&D group" of the R&D team.

c. PL can recruit researcher(s) and research assistant(s) within the R&D cost if it is necessary. Please see "2.6 Requirements for application" for details.

Fig. 1 Outline of "Small-start Type" R&D

Chapter 2 Call for Proposals and Selection

2.1 R&D mission areas for open call

The "Small-start Type" of the Program funds R&D projects that help to bring about transformation of the society and industry. For this purpose, it employs "back-casting" approach in which R&D is designed to realize the future society and industry, rather than technological forecasting to the society. In this Type, R&D mission areas are set by the government (MEXT). For each mission area, prioritized themes are determined by considering social and economic needs, and then R&D ideas for each theme are publicly called for from researchers at universities, private companies, and public research institutions. R&D projects for feasibility studies are selected according to criteria of the Program. (For the prioritized themes and selection policies, see Application Guideline Annex "Chapter 6 Prioritized Theme for Research Proposals; https://www.jst.go.jp/mirai/jp/uploads/application-guideline-r04-c6-en.pdf).

R&D Type	R&D Mission Area and Prioritized Theme			
R&D Type Small-start Type (Feasibility study)	R&D Mission Area and Prioritized Theme "Advanced Intelligent Information Society" (Program Officer: MAEDA Eisaku) Human-centric Digital Twins Services Utilizing AI, Big Data and IoT "New Social Challenges" (Program Officer: TAKAHASHI Keiko) Sustainable and resilient social system for healthy nature "Society Optimized for Diversity" (Program Officer: WAGA Iwao) Assistance and evaluation for enhancing human relationships "Low Carbon Society" (Program Officer: HASHIMOTO Kazuhito) Realization of a low carbon society through game changing technologies "Common Platform Technology, Facilities and Equipment" (Program Officer: OSAKABE Nobuyuki)			
	Realization of common platform technologies, facilities and equipment that create innovative knowledge and products			

ļ
ļ

R&D proposal acceptance begins	Wednesday, March 30, 2022
Briefing of Solicitation	For details and application to proposal, see the open-call page of the website for JST-Mirai program: https://www.jst.go.jp/mirai/en/open-call/research/r04/
Application deadline (Deadline for submitting applications through the e- Rad system)	12:00 noon (Japan time) on Wednesday, May 25, 2022
Document screening period	Early July to Late July
Interview screening period	Late July to Early August
Notification/announcement of selected projects	September or later
R&D project begins	October or later

* The dates are subject to change.

* Please be sure to check the open-call website for the latest information on how to apply.

- * Applications through e-Rad will be accepted from Wednesday, April 13, 2022. The start of application submission will be announced on the open-call website.
- * Specific interview selection schedule will be determined by JST.
- * As soon as determined, the document screening and the interview selection schedule will be announced on the open-call website:

Mirai Program open-call website: https://www.jst.go.jp/mirai/en/open-call/research/r04/index.html

2.3 R&D period

R&D period for the R&D project are set for each prioritized theme. Please be sure to see Application Guideline Annex Chapter 6 "Prioritized Theme for Research Proposals (https://www.jst.go.jp/mirai/jp/uploads/application-guideline-r04-c6-en.pdf)" before making the R&D plan.

2.4 R&D cost

R&D cost for the R&D project is set for each prioritized theme. Please be sure to see Application Guideline Annex Chapter 6 "Prioritized Theme for Research Proposals (https://www.jst.go.jp/mirai/jp/uploads/application-guideline-r04-c6-en.pdf)" before making the R&D

plan.

JST pays R&D costs (direct costs) and indirect costs (a maximum of 30% of the direct costs) to the R&D institution based on the JST-Mirai Collaborative Research Agreement.

2.5 Number of adopted proposals

Five to six proposals per prioritized theme will be adopted depending on the portfolio of each prioritized theme, proposal state, budget and others.

2.6 Requirements for application

Requirements for application are described below from 2.6.1 to 2.6.3. Please be aware of any consequences that may occur if R&D proposals do not meet any requirements.

- Any R&D proposals that do not meet application requirements by the application deadline will be neither accepted nor selected.
- All of the application requirements must be maintained throughout the R&D period after adoption. If any of these requirements are not maintained during the R&D period, the whole or part of the R&D project may be terminated at that point.

In addition to the requirements described below from 2.6.1 to 2.6.3, it is essential to carefully read and understand other points described in "2.7.2 Restrictions on duplicate applications" and "Chapter 4 Key Points for Application."

2.6.1 Requirements for applicants

- a. An applicant who proposes a R&D project as a Project Leader (PL) should be affiliated with an R&D institution in Japan (including a private firm, incorporated association or incorporated foundation) where own R&D team is organized to conduct own R&D project
 - * Those described below are also eligible to propose a R&D project:
 - A foreign researcher who is affiliated with an R&D institution in Japan
 - A researcher who will be affiliated with an R&D institution in Japan to conduct own R&D project when selected, even if one is not affiliated with any specific R&D institution in Japan or is affiliated with an overseas R&D institution at the time of submitting the proposal
 - A researcher who is affiliated with private firms, including any R&D institutions other than universities
- b. An applicant who can take responsibilities as a PL of the R&D team throughout the R&D period (for details, see "3.4 Responsibilities of R&D Principal Investigator (PI) and Main Joint Researchers").
- c. An applicant who should completed the educational program on research integrity at the affiliated R&D institution, or the same program provided by JST prior to by the application deadline (for details, see
 - "4.1 Enrolling in and completing educational program on research integrity")
- d. An applicant should pledge to:
 - Understand and comply with "Guidelines for Responding to Misconduct in Research" (a decision made by Minister of Education, Culture, Sports, Science and Technology, August 26, 2014);
 - Understand and comply with "Guidelines for Management and Audit of Public Research Funds

in R&D institutions (Implementation Standards)" (revised on February 1, 2021);

- Avoid misconduct in research (fabrication, falsification and fraudulent use) and improper use of research funds as the PL and team members when the R&D project is adopted; and,
- Guarantee that there is no record of misconduct in research activities relating to the past R&D outcomes entered in the R&D Proposal Document.

* An applicant is required to confirm the above-mentioned pledges when submitting own proposal via e-Rad.

2.6.2 Requirements for R&D team

a. An R&D team should be organized enabling to conduct the R&D project that the PL proposes.

- b. Any Joint R&D groups should play essential roles within the R&D team and contribute to development of the POC of the R&D project.
- c. If organizing a Joint R&D group that is affiliated with an overseas R&D institution, an applicant must explain the necessity and importance of having the Joint R&D group from the overseas and should manage the R&D project results by securing intellectual property rights and know-how, etc. Please note that such R&D team(s) must be approved by the PO.
- * If an overseas R&D institution is included in the R&D team, the applicant must describe the composition of the overseas Joint R&D group in the proposal (R&D Plan (Form 3)) and the reason why the overseas Joint R&D group is necessary in the Special Matters column. Please note that the overseas R&D institution must sign a contract stipulated by JST in which maximum indirect costs is 30% of direct costs. An applicant is also required to submit a "Form of Consent for the Application to the JST-Mirai Program" prior to the interview for proposal selection. Please follow any instructions informed by the JST secretariat.

2.6.3 Requirements for R&D institutions

R&D institutions must fully recognize that the funding for the JST-Mirai R&D project is sourced from public funds/tax revenue and should make efforts to conduct the R&D project efficiently, as well as to comply with any associated laws. Any R&D institutions that cannot take responsibilities described in "3.5 Responsibilities of R&D institutions" will not be approved to conduct the R&D project. Therefore, an applicant must be sure to obtain prior approval from own R&D institution before completing submission of the application.

2.7 Appilication method

The application requirements such as R&D period and costs differ depending on the prioritized theme. Be sure to read the application requirements provided in Application Guideline Annex "Chapter 6 Prioritized Theme for Research Proposals (https://www.jst.go.jp/mirai/jp/uploads/application-guideline-r04-c6-en.pdf) before making an application.

2.7.1 Guidelines for entry in "Small-start Type" R&D proposal documents (forms)

Be sure to use the forms provided for FY2022. Please download the forms from the program website shown below, and appropriately prepare R&D proposal documents by following the guidelines for entry in these forms (refer to blue letters in the proposal documents).

https://www.jst.go.jp/mirai/en/open-call/research/r04/

Form No.	Document name
Form 1	R&D Proposal: Cover
Form 2	R&D Project Description
Form 3	R&D Goal and Plan of Feasibility Study
Form 4	R&D Budget Plan for Feasibility Study
Form 5	R&D Project Proposer (Project Leader)
Form 6	Other Funding Supports
Form 7	Protection of Human Rights and Compliance with Laws and Regulations
Form 8 (Optional)	References
Form 9 (Optional)	View of the Coordinating Person or Company Contact

A list of the documents to be submitted is shown below.

* Ensure the file does not exceed 3MB.

* Be sure to check "2.8.3 Managing the conflicts of interest" when preparing the proposal documents.

- * See "Chapter 5 Submission via the Cross-ministerial R&D Management System (e-Rad)" for application methods for R&D proposals.
- * Be sure you have an appropriate understanding of "Chapter 4 Key Points for Application" and "2.7.2 Restrictions on duplicate applications" before making an application.
- * When you consult a person who plays a role of coordinator or a person in charge of the related company to clarify POC issues or social or industrial issues which must be entered in the proposal documents, please state the view of this person if it is possible in Form 9 "View of the Coordinating Person or Company Contact".
- * The submission of Form 8 and Form 9 is not mandatory.

2.7.2 Restrictions on duplicate applications

The following restrictions are imposed on duplicate applications concerning R&D proposals in FY2022. Certain measures may also be taken for unreasonable duplication or concentration for other projects inside and outside JST that are not described here. See "4.2 Measures against unreasonable duplication and excessive concentration" for details.

- (1) An R&D Principal Investigator is only allowed to apply ONE proposal for all prioritized theme in the "Small-start Type" R&D.
- (2) The researcher who is currently the PL/PM of an R&D project in the JST-Mirai program cannot apply to the open call, except when that R&D project is scheduled to end within FY2022. If the R&D project is extended due to evaluation results, etc., or continued as full R&D project, an individual coordination is made to single out the project led by the R&D PI.
- (3) The following restrictions are imposed on R&D proposals if the applicant participates in R&D as the main joint researcher:
 - a. Multiple applications are not allowed in which the R&D PI and the main joint researcher exchange positions.
 - b. If a person participates in a R&D proposal as an R&D PI or a main joint researcher and participates in other R&D proposal as a main joint researcher, the PO takes into account the contents and scales of the research to make adjustments, such as decreasing R&D costs or disapproving some of the R&D projects in which the researcher participates when both R&D projects are adopted.

2.8 Selection method

See "(1) Solicitation and Selection Schedule" on the cover for the schedule related to selection.

2.8.1 Selection process

The PO cooperates with the R&D management committee to review documents and conducts interviews in order to make a selection. He/she may also seek cooperation from outside evaluators.

A preliminary screening may be carried out prior to the document-based screening depending on the number of applications, etc. for each prioritized theme based on the content of the R&D proposal document (R&D Project Description-Form 2).

This preliminary screening mainly examines the consistency of the proposal with the purpose of the prioritized theme (potential contribution to achieving the targets of the prioritized theme), and with the purpose of the "Small-start Type" R&D. Only proposals that pass the preliminary screening proceed to the document-based screening.

The preliminary screening is only for the "Small-start Type". The prioritized theme subject to the preliminary screening is not disclosed.

In addition, surveys besides the above may be conducted if necessary, for selection. Furthermore, if a R&D applicant or a main joint researcher is affiliated with a commercial organization, submission of a financial statement of the institution may be requested.

JST selects the R&D PI (PL) and R&D projects based on the above procedure.

The R&D management committee members are introduced on relevant webpages of the website of this program (https://www.jst.go.jp/mirai/en/). The members may be changed any time from the

beginning of open call to the end of selection.

2.8.2 Special treatment

R&D proposals may be evaluated or adopted for different prioritized theme(s) if PD or POs see such proposals more suitable for another prioritized theme(s). In such a case, a prior notice is sent to the applicant.

2.8.3 Managing the conflicts of interest

To achieve fair and transparent evaluation and research fund allocation, JST will manage the conflicts of interest as described below in accordance with JST's rules.

1) Managing conflicts of interest of those involved in selection

For fair and transparent evaluation, the following stakeholders are excluded from the selection of R&D applicants, etc.

- a. Those who are in kinship with an R&D applicant.
- b. Those who belong to the same department or major the same subject at an R&D institution of a university or a national R&D agency, or work in the same company.
- c. Those who currently closely conduct joint research with the R&D applicant (for example, a joint project, co-authored research paper, research members having the same objectives, or joint researcher of a research project organized by the applicant; in short a person considered to belong to the same research group).
- d. Those who are in a close teacher-student relationship or in a direct employment relationship with an R&D applicant.
- e. Those who are in an academically or commercially competitive relationship with the R&D projects of an R&D applicant.
- f. Others who are judged to be stakeholders by JST.

2) Managing conflicts of interest of R&D applicant

If the R&D applicant makes a research proposal with a "R&D applicant-related organization" specified as a joint R&D group, and JST allocates research funds to the latter, it may cause a conflict of interest. Consequently, JST properly determines and manages the conflicts of interest between the two in consideration of the necessity, rationality, and appropriateness of doing so to avoid any doubt from third parties.

The "R&D applicant-related organizations" refer to the joint R&D group that meet any of the following. For "a" and "b," not only R&D applicant but also the spouses and relatives within the first degree of R&D applicant (hereinafter collectively referred to as "R&D applicant, etc.") shall be handled as follows:

a. An organization established based on the R&D results of "R&D applicant, etc." (including the cases where the R&D applicant, etc. is not directly involved in management and only holds

the title of a technical adviser, or where the R&D applicant, etc. only hold shares.)

- b. An organization where the "R&D applicant, etc." is appointed as an officer (including CTO but not a technical advisor).
- c. An organization where the "R&D applicant, etc." holds shares.

d. An organization from which the "R&D applicant, etc." earns royalty income.

JST will deliberate a research proposal with a "R&D applicant-related organizations" specified as a joint R&D group at an R&D management committee from the perspective of necessity, rationality and appropriateness of doing so.

To specify a "R&D applicant-related organizations" as a joint R&D group, the applicant is requested to notify that the "R&D applicant-related organizations" is involved in the joint R&D groups in the Form 1 of the proposal document.

JST may request applicants to submit additional documents to manage the conflicts of interest of "R&D applicant, etc.".

3) Managing conflicts of interest of JST

Adopting a JST-invested company (hereinafter referred to as the "invested company") for the program and allocating R&D funds to the invested company may fall under the JST's conflicts of interest. To avoid this, JST will implement management of the conflicts of interest to avoid any doubt from third parties related to JST and the invested company.

JST will deliberate a research proposal with a JST invested company at the R&D management committee from the perspective of necessity, rationality and appropriateness of selecting the invested company.

JST manages the conflicts of interest to secure its fairness and transparency and does not handle a JST-invested company unfavorably.

* For JST-invested companies, visit the following website:

https://www.jst.go.jp/entre/result.html#M01 (Japanese version only)

When JST no longer funds the company, the company is not included in the management of the conflicts of interest and does not need to make a notification.

* The standard date of the notification is the day on which the open call for this program begins. The company to which JST has announced to invest as of this date should be notified. The company to which investment is internally decided but not announced need not be disclosed to maintain confidentiality within JST.

For the disclosed investment of JST that is publicized, please visit the following website (Japanese version only):

https://www.jst.go.jp/entre/news.html

2.8.4 Interviews for selection and notice of selection results

a. An R&D applicant who is selected for interview as a result of document-based selection receives such a notice and is informed on guidelines for interview, schedule, and additionally requested information materials. Submission of applications and plans for other research funds may also be requested at the time of the interview. JST and the PO may contact proposers subject to interviews concerning matters for which explanations are requested at the interview, depending on results of document-based selection and surveys. If an R&D applicant or a main joint researcher is affiliated with a commercial organization, submission of a financial statement of the institution may be requested.

The interview schedule will be announced on the following website as soon as it is determined.

https://www.jst.go.jp/mirai/jp/open-call/research/r04/

- b. The R&D applicant himself/her is requested to explain the contents of the proposal at the time of the interview. Interviews are in principle conducted in Japanese. However, if a R&D applicant finds it difficult to explain a proposal in Japanese, he/she may explain it in English.
- c. For a R&D applicant to be adopted, it may be subject to adjust the R&D plan and team, as well as conditions of an R&D agreement. If a R&D applicant does not agree to these conditions, his/her proposal shall be rejected.
- d. A R&D applicant whose proposal is adopted receive a notice as well as a procedure for R&D initiation.
- e. A R&D applicant whose proposal is not adopted receives the selection result and the reasons why the proposal was not adopted after all selection process is over.

2.9 Selection viewpoints

Common selection criteria for the JST-Mirai program "Small-start Type" are described below <u>("Small-start Type" R&D proposals are required to meet all criteria below</u>).

Small-start Type

1. Overall concept of R&D

- · Contributes the R&D concept to the realization of a future society as stated in the prioritized themes.
- Set high-impact goals that meet the needs of society and industry.
- Clear the results to be achieved.

2. Competitiveness and Originality of the proposal

• The proposal must be a challenging one that is not an extension of conventional technologies, and must be expected to lead to a breakthrough in science and technology.

• Has the proposal have competitive advantage and originality based on domestic and international R&D trends.

<u>3. R&D plan</u>

- · Appropriate research and development plan to achieve the goals.
- · Make social and private sectors involved to deploy the results after development of the POC.

4. R&D team

- Appropriate R&D structure and division of roles to achieve the goals.
- Build a system to enable the applicant (PL) to show leadership toward achieving the goal.
- The utilization and management of R&D results, including intellectual property rights and research data, should be possible.
- · Disseminate information on the R&D ideas in an easy-to-understand manner.

<Supplement>

- The PL of the "Small-start Type" R&D needs to play a role for promoting R&D under the PO's management. The PL is expected to integrate the collaboration with his/her aids, pass the position as the PL to another researcher, and deal with the affiliated institution for support, etc. in a comprehensive way to manage the while R&D project. Therefore, the preparation and investigation concerning the introduction of the R&D support method and system, etc. by the affiliated R&D institution are also considered as reference in the selection of R&D in feasibility study.
- The "Small-start Type (Component technology type)" is not transferred to full R&D project on an individual basis, but designed to establish the component technology necessary to achieve the goal of the R&D project carried out under a prioritized theme. The selection process is conducted in accordance with the relevant prioritized theme and selection criteria for the Small-start Type.
- For the viewpoints and policies of for selection and policies of operation for individual prioritized themes, see Application Guideline Annex "Chapter 6 Prioritized Theme for Research Proposals (https://www.jst.go.jp/mirai/jp/uploads/application-guideline-r04-c6-en.pdf).
- The "unreasonable duplications" or "excessive concentration" of R&D costs is also a factor of selection. For details, see "4.2 Measures against unreasonable duplication and excessive concentration."
- JST may ask for the submission of information materials besides the R&D proposal documents to manage the conflicts of interests among R&D researchers. (An example is a case in which the applicant allows an organization with a conflict of interest to participate in a joint R&D group.)

Chapter 3 Promotion of R&D after adoption

3.1 Until the start of R&D

3.1.1 Preparing an R&D plan

After a proposal is selected, the R&D Principal Investigator (Project Leader (PL) for the "Smallstart Type") will be requested to prepare an R&D plan covering the entire R&D period and an annual R&D plan for each fiscal year (R&D items, implementation plan, R&D costs and R&D team, etc.). The R&D plans are determined after the confirmation and approval by the PO.

In determining the R&D plans, R&D projects may be integrated, linked, or adjusted. In addition, R&D costs and R&D teams may be reviewed during the R&D period according to the budget allocation to the entire program.

3.1.2 R&D agreement

After the above R&D plans are determined, JST will enter into an R&D agreement with the R&D institutions with which the PL/PM and main joint researcher are affiliated. In principal, patents and other intellectual property rights resulting from R&D shall, in accordance with contract R&D agreement terms, reside with R&D institutions under the condition that the R&D institutions abide by the items provided in Article 17 of the Industrial Technology Enhancement Act (Japanese version of the Bayh-Dole Act). However, this rule does not apply to foreign R&D institutions.

If the R&D institution cannot conclude an R&D agreement with JST, failed to establish a system necessary for managing and auditing public research expenses or guidelines for research misconduct, or undergoes an extremely unstable financial situation, R&D by that R&D institution may not be carried out. For details, see "3.5 Responsibilities of R&D institutions.

3.2 R&D costs

JST will pay R&D costs (direct cost) and indirect costs (30% of the direct costs in principle) as the R&D costs for commission to R&D institutions based on the R&D agreement.

3.2.1 R&D costs (direct costs)

R&D costs (direct costs) are the costs that are directly related to and required for the pursuit of the subject research. R&D costs can include:

- a. Commodities: Costs for the purchase of new facilities (*1), equipment, consumable supplies, etc.
- b. Travel Expenses: Expenses for travel by the PM/PL, main joint researcher, R&D participants listed on the R&D plan and Individual Researcher.
- c. Personnel costs: Salaries for R&D participants (excluding the R&D PM/PL, main joint researcher (*2)) and honorariums.
- d. Other Expenses: Costs related to the presentation of R&D results (research paper submission fees, etc.), costs for leasing and transferring of equipment, etc.
- *1 The purchase of new research equipment and apparatuses will proceed according to the

"Research Equipment and Apparatus Sharing Systems for Research Organization Units" (hereinafter referred to as "apparatus sharing systems"), which shall operate on the premises of "Introduction of New Research Equipment and Apparatuses Operating Integrally with Research Organization Management" (Advance Research Fundamentals Working Group, Scholarship Commission, November 2015). Please refer to "4.12 Promoting the joint use of research facilities and equipment" for details.

(Note) The following costs are examples of those not treated as R&D costs (direct cost):

- · Costs for items which are inconsistent with the research objectives
- · Costs considered to be more appropriately handled as overhead cost (indirect cost)
- · Costs that is determined by JST to be unauthorized use at the time of settlement) (*)
- * For certain items, JST has created specific rules and guidelines for the program from sources like the R&D agreement, administration manuals, and a common governmental expense categorization table. Universities, etc. (Universities, public R&D institutions and public-service corporations recognized by JST) and companies (mainly R&D institutions operated by private companies) may differ in their handling of administrative matters. For more details, please refer to the following websites (Japanese version only).

https://www.jst.go.jp/contract/index2.html

- *2 In principle, universities and other institutions can subsidize personnel cost and costs for nonresearch work delegated to others (buyout costs) of an R&D Principal Investigator (hereinafter referred to as "PI") participating in the JST competitive research funding project, provided that the PI satisfies certain requirements. Please check the necessary requirements below.
- o"Introduction of a buyout system to make it possible to pay delegated-work costs (costs for nonresearch work delegated to others) from direct costs and the payment of PI personnel cost from direct costs (correspondence)" (September 17, 2020)"

https://www.jst.go.jp/osirase/2020/pdf/20200917.pdf (Japanese version only)

 "Regarding the JST-Mirai program relating to the 'payment of PI personnel cost from direct costs'" (January 13, 2021)

https://www.jst.go.jp/mirai/jp/uploads/manual/pi_houshin.pdf (Japanese version only)

 "Regarding the JST-Mirai program in the 'introduction of a buyout system to make it possible to pay delegated-work costs (costs for non-research work delegated to others) from direct costs'" (January 13, 2021)

https://www.jst.go.jp/mirai/jp/uploads/manual/buyout_houshin.pdf (Japanese version only)

3.2.2 Indirect costs

Indirect costs are the costs required for the management, etc. of R&D institutions pursuing R&D; they are in principle 30% of R&D costs (direct costs). According to "Common Guidance for the Execution of Indirect costs of the Competitive Fund" (agreed upon by the coordination committees of relevant ministries and agencies on April 20, 2001 and revised on October 1, 2021), regarding indirect costs, a policy on use, etc. shall be created and shall be systematically and properly executed to ensure that use is transparent.

3.2.3 Multiple-year contract and carryover

From the perspective of the effective and efficient use of R&D costs to maximize R&D results and prevent unauthorized use, in order to be capable of carrying over R&D costs and procurement contacts over financial years, JST has made R&D agreements into multiple-year contracts. With regard to carrying over, universities are treated differently from business firms. In addition, multiple-year contract or carrying over may not be acceptable to the office management system of some research organizations.

3.3 Evaluation

The PO grasps the progress of R&D and R&D results, and with the cooperation of the R&D management committee members, carries out the stage-gate and post-stage-gate evaluations.

<R&D project evaluation>

- a. The PO grasps the progress of R&D and R&D results, and with the cooperation of the R&D management committee members, etc., carries out an evaluation for the transition from feasibility study to full R&D project (1st stage-gate evaluation), and evaluation of full R&D project (2nd stage-gate evaluation) and ex-post evaluation of full R&D project. The 2nd stage-gate evaluation is carried out about three years after the start of full R&D project, and ex-post evaluation as early as possible after the termination of R&D, or at an appropriate time before the termination of R&D.
- b. In addition to the above, the R&D project is evaluated at the time when the PO judges it necessary.
- c. The results of evaluation will be reflected in the subsequent adjustment of R&D plans and resource allocation (including increase or decrease of R&D costs and review of R&D team). Depending on the evaluation results, measures such as early termination (cancellation) of the R&D project or coordination between R&D projects will be taken.
- d. After a certain period of time has passed since the end of R&D, surveys will be conducted on the progress and utilization status of R&D results and the activities of participating researchers, etc., and be conducted follow-up evaluation based on the results.

In addition to the evaluation of R&D projects, prioritized themes and POs may be evaluated. In this case, the progress of each theme toward the goal, and the operational state are evaluated. The R&D representative of the selected R&D project must cooperate for this process in a scope required for evaluation.

<Stage gate evaluation criteria>

The evaluation criteria for the 1st stage-gate evaluation, carried out for the transition from feasibility study to full R&D project, and the 2nd stage-gate evaluation are shown below (comprehensive evaluation based on items 1 to 3).

The 1st stage-gate ("Small-start Type": at the time of transition from feasibility study to full R&D project)

1. Overall concept of R&D

A. Overall

- The project aims for the creation of R&D results that benefit the whole society.
- \cdot The social and industrial needs are accurately understood.
- B. Trends in Japan and overseas
- Competitiveness and originality of the project are demonstrated by analyzing R&D and economic trends around the world including Japan.

2. Results of feasibility study (FS)

• R&D results that will serve as the basis for full R&D project must have been generated during the FS period.

3. R&D plan / team

- A. R&D plan
- There is a plan reflecting R&D progress during feasibility study for achieving the goal.
- When multiple projects are integrated, their effects and plans are well sorted out.
- B. R&D team
- Means to achieve the goal such as the involvement of private companies (e.g. participation of researchers and engineers, provision of equipment and research site, and cooperation for demonstration) are provided under the R&D team.
- The PL is capable of understanding the issues of the whole team and promoting R&D to achieve the goal under the R&D team (including intellectual property management and information dissemination).

The 2nd stage-gate (the 3rd fiscal year from the start of full R&D project)

1. Overall concept of R&D

- A. Overall
- · A concrete concept for social implementation should be presented.
- \cdot The impact on society as a whole must be specifically estimated.
- · The overall concept is appropriately revised based on the needs of society and industry.
- B. Trends in Japan and overseas
- Competitiveness and originality of the project are demonstrated by analyzing R&D and economic trends around the world including Japan.

2. Progress

- The R&D goals set at the beginning of the project have been achieved.
- · The R&D results initially expected have been produced.
- The R&D structure and the division of roles were appropriate to achieve the goals.
- The R&D was conducted appropriately, taking into consideration the points raised at the first stagegate, site visits, etc.

<u>3. R&D plan / team</u>

- A. R&D plan
- Issues for achieving the goals and social implementation should be clarified, and the research plan should be reviewed appropriately to solve the issues.
- The requirements for transferring R&D results to private companies, etc. are identified.
- B. R&D team

- The PL is capable of understanding the issues of the whole team and promoting R&D to achieve the goal under the R&D team (including intellectual property management and information dissemination)
- R&D is promoted with cooperation of private companies, etc. under the R&D team.*
- * Evaluation is based on, among others, the specific cooperation of private companies (e.g. participation of researchers and engineers, provision of equipment and sites, cooperation for demonstration) and an extensive system planning to seamlessly connect to R&D after the completion of full R&D project.

3.4 Responsibilities of R&D Principal Investigator (PI) and Main Joint

Researchers

3.4.1 Responsibilities of R&D promotion

- (1) R&D PI and main joint researcher are responsible for fully recognizing that JST R&D costs are funded by precious tax revenues collected from citizens, and for fairly and efficiently executing budgeted expenditures
- (2) Once a proposed R&D project is selected, the PI shall affirm that they will fulfill the following requirements, presented to them via JST briefings and other means, and submit to JST a written document evidencing this affirmation.
 - a. Comply with application guidelines and other requirements.
 - b. Pledge not to become involved in research misconduct (fabrication, falsification, plagiarism) or in the improper use of R&D costs, upon understanding that the costs are covered by taxes.
 - c. To prevent any research misconduct and improper use of R&D costs, enroll in and complete the JST-specified research integrity educational program (eAPRIN (former CITI)) and promise to educate the research participants of the obligation to enroll in and complete the program and make them understand.
- (3) The R&D PIs and research participants are required to complete the research integrity educational program (eAPRIN (former CITI)) specified by JST to prevent misconduct in R&D (fabrication, falsification and plagiarism). Failure to complete the research integrity educational program can result in the suspension of the R&D costs until confirmation has been made that the program has been completed. For details, refer to "4.1 Enrolling in and completing educational program on research integrity."
- (4) Promotion and management of R&D
 - a. The R&D PI is held responsible for the whole R&D, with responsibilities including preparation and implementation of the R&D plan. The R&D PI is responsible for cooperation with R&D institutions to provide an R&D site and research environment necessary for R&D promotion. When serious obstruction of R&D implementation location and environments to promote research is found, R&D project may be cancelled.
 - b. The R&D PI needs to comply with "Intellectual Property Management Basic Policy," conclude

"Joint Intellectual Property Agreement" and cooperate with R&D institutions in order to promote proper activities for intellectual properties. A copy of this Joint Agreement must be submitted to JST and the PO within six months after project starts. If the Joint Agreement is not concluded, the participation of the R&D institution may be cancelled, or the R&D project may be suspended. "Intellectual Property Management Basic Policy" https://www.jst.go.jp/mirai/en/open-call/research/r04/index.html

- c. The R&D PI is also responsible for submitting R&D reports and other required documentation to the JST office and evaluating R&D project as well as responding to the request of JST office or PO to send the progress report as required.
- d. Researchers will cooperate with JST-Mirai Program evaluations. Researchers will cooperate by providing various types of information, responding to interviews, etc. in connection with followup evaluations performed sometime after project completion.
- (5) The R&D PI is also responsible for the appropriate execution, management and operation of R&D projects and R&D costs (expenditure planning, monitoring, etc.) together with the R&D institutions, as well as the appropriate management of participants in the R&D. The main joint researcher is responsible for the management of the allocated R&D costs (expenditure planning, monitoring, etc.) together with the R&D institution. When students join R&D team, their academic supervisors are also responsible as "research monitors" for the terms and conditions of the R&D agreement with JST. If, for example, a student has committed misconduct or other improprieties, both the student and the academic supervisor will be held accountable.
- (6) The R&D PI is asked to be mindful of research and working environments and conditions for their own group's research participants, and research staff and others whose employment is being funded by R&D costs.
- (7) It is recommended that R&D PI actively supports the development of varied domestic and international career paths for young doctoral researchers employed with R&D costs. In the research project selection interview, conformation may be made with research project applicants about the plan for supporting the development of varied domestic and international career paths for young doctoral researchers employed with R&D costs^{*1}.

For details, see "4.13 Improving the treatment of doctoral students," "4.14 Ensuring self-sustaining, stable research environment for young researchers," "4.15 Voluntary research activities of young researchers employed for implementing the project" and "4.16 Supporting various career paths for young researchers."

- ^{*1} Some of the activities based on the career support activity plan may be included in the research effort.
- (8) Researchers shall abide by R&D agreements entered into by JST and R&D institutions and shall abide by JST's various rules.

(9) Researchers will cooperate with accounting examinations by JST, accounting audits by the national government, and similar activities.

3.4.2 Responsibilities regarding R&D results

- a. Given that the R&D project conducted in this program is financed by the government and the R&D results must be transferred to the society and industry, it is asked that R&D results are actively reported on both domestically and internationally, with due consideration for the acquisition of intellectual property rights. It is also asked that active efforts be made to secure intellectual property rights under the "Intellectual Property Management Basic Policy." In principle, intellectual property rights are to be applied, in accordance with R&D agreement terms, by the R&D institutions with which researchers are affiliated.
- b. When reporting on R&D results through research papers or other media, please indicate that the results were obtained via the JST-Mirai Program "Small-start Type" R&D.
- c. Based on the "Basic Policy of JST for Handling Research Achievements toward the Promotion of Open Science," every researcher should submit to JST a data management plan that sets forth policies on the storage, management, disclosure/restricted disclosure/non-disclosure of R&D data obtained from R&D activities for each of the items below, together with the R&D plan. Further, the storage, management, and disclosure/restricted disclosure/non-disclosure of data based on the above policies must be handled in a suitable manner. For details regarding the entry of the following items, please refer to the "Operational Guideline for the Basic Policy of JST for Handling Research Achievements toward the Promotion of Open Science" below.

https://www.jst.go.jp/pr/intro/openscience/guideline_openscience.pdf (Japanese version only)

<Entries in the data-managing plan>

- Policy on the storage and management of research data to be managed
- · Policy related to publicity and non-publicity in regard to research data
- Providing methods and systems for data to be made public
- · Assumed use applications for public research data
- · Initiative for the promotion of the use of public research data
- Other items of note
- d. The R&D PI and researchers are requested to participate in the workshops and symposia that JST holds in Japan and overseas, interdisciplinary activities and outreach activities aiming for the promotion of R&D collaboration and synergy in prioritized themes, technology themes and mission areas. In addition, he/she should actively promote global activities and issue information while promoting R&D activities.

3.4.3 Others

a. It should be noted that JST will provide research project names, names of researchers, R&D cost information, and other required information to the Cross-ministerial R&D Management System (e-Rad) and the Cabinet Office ("4.29 Handling of information for Research and Development proposal (R&D proposal) entry matters, etc."). The R&D representative, therefore, may be asked

to provide various types of information in that connection.

- b. Researchers are asked to actively engage citizens in discussions of science and technology to promote citizen's understanding and support of science and technology. Efforts to engage citizens in discussions of science and technology will be evaluated.
 - * For details, refer to "4.20 Promoting dialogue and collaboration with the public."

3.5 Responsibilities of R&D institutions

R&D institutions must fully recognize that the R&D funds are public funding, ensure compliance with related law, and make efforts to implement the research effectively upon implementation. <u>R&D</u> institutions that cannot accomplish the tasks described below will not be enjoined to implement research; thus, when applying, the prior consent of all R&D institutions (hereinafter referred to as the participating organization) at which the implementation of research is planned shall definitively be obtained.

(1) For domestic organizations

- a. R&D institutions shall conclude the R&D agreement with the content proposed by JST. Further, they are responsible for properly implementing research in accordance with the R&D agreement, documents for administrative process, and R&D plans. When the agreement cannot be concluded, or when it is judged that R&D at an R&D institution is not being implemented properly, the implementation of R&D at the research organization is not be approved.
 - * For the latest sample of the R&D agreement document, please refer to the URL below. https://www.jst.go.jp/contract/index2.html (Japanese version only)
- b. R&D institutions, with an autonomously instituted management and audit system for public research budgets, are obligated to properly execute the contract research funds in accordance with the "Guidelines for Management and Audit of Public Research Funds in R&D institutions (Implementation Standards)" (decided by the Minister of Education, Culture, Sports, Science and Technology on February 15, 2007; revised on February 1, 2021). R&D institutions, in addition to reporting the status of their management and audit system for public research budgets to the Ministry of Education, Culture, Sports, Science and Technology (MEXT), are also obligated to support various investigations into their system implementation and other related matters. ("4.26 Guidelines for Management and Audit of Public Research Funds in R&D institutions (Implementation Standards)")

https://www.mext.go.jp/a_menu/kansa/houkoku/1343904_21.htm (Japanese version only)

c. In accordance with the "Guidelines for Responding to Misconduct in Research" (August 26, 2014, adopted by the Minister of Education, Culture, Sports, Sciences and Technology), R&D institutions are asked to construct necessary regulations and systems that they are responsible for in order to prevent misconduct. R&D institutions are responsible for responding to various investigations relating to systems construction based on the guideline. ("4.27 Guidelines for Responding to Misconduct in Research")

https://www.mext.go.jp/b_menu/houdou/26/08/1351568.htm (Japanese version only)

- d. R&D institutions are responsible for ensuring that research participants fully recognize the contents of the above guideline described in b and c and have been trained with teaching materials related to research ethics provided by JST.
- e. R&D institutions shall expend and manage R&D costs properly in accordance with the regulations of the research organization while considering flexibility; when items are regulated by administrative process documents, etc., provided by JST, which state rules specific to the program, the rules shall be obeyed. (For R&D institutions receiving Grants-in-Aid for Scientific Research (KAKENHI) expenses, it is possible that items not described in administrative process documents for use in R&D costs may be handled in conformity with the Grants-in-Aid for Scientific Research (KAKENHI) expenses.)
- f. R&D institutions shall either enter into contracts with associated researchers that ensure that intellectual property rights resulting from the implementation of research will be accorded to the R&D institutions or construct work regulations in this vein. In case a student who is not employed by a research organization participates in research, a necessary measure, such as concluding a contract with the student in advance, needs to be taken in order for pertinent intellectual property right associated with the invention (including ideas) that the student made during the research to belong to the research organization unless it is clear that the student cannot be an inventor. Take into consideration eliminating conditions unfavorable to the student, the inventor, concerning the price of transferring the intellectual property right.

In addition, when intellectual property rights are transferred or exclusively licensed, the prior approval of JST is needed, and when application, registration, implementation, and renunciation are conducted, a prior report to JST is needed in principle.

- g. R&D institutions are responsible for responding to accounting investigations by JST and account audits by the Government.
- h. R&D institutions shall follow measures pertaining to changing terms of payment and will accept decreased payments on R&D costs decided upon by JST based on JST investigations related to administrative managing systems, financial conditions, etc.

Depending on the results of the project evaluation at the end of the JST's medium- and longterm objective periods, it may be called for dissolution or contraction. In the case of any changes to national budgetary measures, JST may take such measures as contract termination or reduction in contract research expenses, during the term of the contract pursuant to the special provisions of the contract R&D agreement. Based on the results of the intermediate evaluation (stage-gate evaluation), etc. of the research subject, JST may take measures, such as changing the contract research funds or the contract period or cancelling the research. If JST determines that the continuation of R&D is not appropriate, it may take measures, such as cancellation of the contract even during the term of the contract. The R&D institutions need to accept these measures.

i. When R&D institutions are national or municipal institutes, such organizations concluding R&D agreements must definitively implement necessary budgetary measures before starting R&D agreements for which they are responsible. (In case it becomes apparent that the non-fulfillment of necessary procedures after contracting will occur, measures to release the R&D agreement

and rescind R&D costs will be taken.)

j. As part of the effort to prevent misconduct in R&D activities, JST has required researchers, who are part of newly selected R&D projects and who are also affiliated with an R&D institution, to enroll in and complete the educational program on research integrity (the procedures required for enrollment will be handled by JST). The R&D institution must supervise the relevant researchers to enroll in and complete the program, without fail. In the event that the relevant researchers fail to complete the educational program as stipulated despite researchers have LST.

despite repeated reminders by JST, JST will instruct the R&D institution to halt, partially or entirely, the execution of contract R&D costs payments. In line with this instruction, the R&D institution is to halt all use of the R&D costs and not restart their use until further notice from JST.

- k. Take necessary measures, such as concluding a joint research contract with participating organizations within a range of R&D agreements with JST concerning handling of intellectual property rights or confidentiality in order to avoid problems in properly undertaking R&D or utilizing the R&D achievements.
- I. Since the contract R&D costs are funded by national funds, the R&D institutions shall take appropriate measures to fulfill their accountability in consideration of economics, efficiency, effectiveness, legality, and accuracy. The R&D institution shall strive to execute them in accordance with a plan and shall not procure something to consume budgetary funds at the end of the R&D period or at the end of the fiscal year

(2) For overseas institutions

a. In principal, R&D institutions shall conclude R&D agreements with content proposed by JST. (In some cases, the contract terms may be altered when the change is considered reasonable due to the characteristics, etc. of the R&D.) Indirect costs are capped at 30% of direct costs. Further, R&D institutions are responsible for proper implementation of the research in accordance with the R&D agreement document and R&D plan. When R&D agreement cannot be concluded, or when it is judged that R&D at the R&D institution will not be properly implemented, the implementation of R&D at the R&D institution shall not be admitted.

If you wish to form a R&D team that includes overseas research institutions (approval of PO is required), the reason of the need for joint researchers belonging to overseas R&D institutions must be entered in the R&D proposal documents. This also applies to the proposal for which R&D costs from JST is assumed. In case that an agreement is not made, a cooperation plan with that overseas group also need to be entered in the R&D proposal documents.

- b. R&D institutions are responsible for properly disbursing and managing R&D costs for which they are responsible based on the R&D agreement, guiding principles, etc. When JST designates guiding principles, etc. separately; they are responsible for creating and reporting expense details (for domestic organizations, this corresponds to accounting books) in English. R&D institutions shall respond to various investigations related to implementation status per JST request in the period of the agreement.
- c. R&D institution shall transfer intellectual property rights resulting from R&D to JST without compensation (Article 17 of the Industrial Technology Enhancement Act, the Japanese version

of the Bayh-Dole Act, will not apply to overseas organizations).

d. A predetermined form (Prior confirmation on the conclusion of a contract for overseas R&D institutions), which ensures that the R&D institution (person in charge of the contract division) has made prior agreement on each term of the contract, must be submitted by entering the contact person for the contract for overseas R&D institutions in the form by the time of interview for selection (see the website below offering the relevant information).

If the R&D agreement cannot be concluded and it is difficult to implement the cooperation plan, the adoption will be canceled.

- * Sample of the R&D agreement for overseas institutions and form of prior confirmation for overseas R&D institutions on the execution of agreement:
 - https://www.jst.go.jp/mirai/en/open-call/research/r04/
- * JST may decide to avoid R&D agreement in view of the security export control if the institution is enlisted in the "Foreign User List^{*1}" published by the Ministry of Economy, Trade and Industry.

3.6 Other Consideration

3.6.1 Difficulties in continuing R&D

JST will determine whether or not to continue R&D in the following cases based on the discussions at the PD committee and R&D management committee:

- a. The R&D PI has died, or received an order for commencement of guardianship;
- b. The R&D PI committed improper use of R&D expenses or misconduct in R&D activities; or
- c. Other cases making the continuation of R&D difficult

3.6.2 Childbirth, Childcare and Nursing Care Support System

JST implements the childbirth, childcare, nursing care support system as part of its efforts to promote gender equality. The system is intended to allow a full-time researcher who is paid from R&D costs (excluding indirect costs) for a JST project to continue R&D during childbirth, childcare or nursing care, or continue his/her carrier when returning to R&D after an imperative leave for the above reasons. In the system, JST pays "gender equality promotion costs" (upper limit: JPY 300,000/month × Number of supporting months) for R&D project. For details, please visit the following website:

https://www.jst.go.jp/diversity/about/research/child-care.html (Japanese version only)

3.6.3 Using JREC-IN Portal

The Researcher Human Resources Database (JREC-IN Portal: https://jrecin.jst.go.jp/) is one of the largest portal sites supporting the career of research human resources in Japan. It is a service to carry information on human resources relating to R&D including researchers, their supporters and engineers

^{*1} The Ministry of Economy, Trade and Industry disclosed the "Foreign User List" to suggest the possibility of cargo and technology used for the development of weapons of mass destruction, etc. https://www.meti.go.jp/policy/anpo/law05.html#user-list (Japanese version only)

for viewing free of charge.

At present, the database has more than 130,000 registered users, and publishes more than 19,000 annual job postings for universities, public R&D institutions, private companies, etc. In addition, the utilization of the Web application function of the JREC-IN Portal simplifies the management of application documents and mitigates burden on job applicants. To find research personnel (post doctors, researchers, etc.) having an advanced knowledge in promoting R&D projects, please use the JREC-IN Portal.

JREC-IN Portal is linked to researchmap. In addition, the information registered in researchmap can be used in the resume and accomplishment list creation function of JREC-IN Portal, allowing the user to create these forms easily.

Chapter 4 Key Points for Application

4.1 Enrolling in and completing educational program on research integrity

An R&D proposer must complete the educational program on research integrity before applying to open call. If JST cannot confirm the completion of program, the applicant may be considered to have failed to meet the application requirements.

To enroll in the educational program on research integrity and to submit a declaration of completion, follow either procedure (1) or (2) below. For how to enter with e-Rad, please refer to Chapter 5 "Submission via the Cross-ministerial R&D Management System (e-Rad)".

(1) For applicants who have completed an equivalent program at their institution

Applicants who have already completed an educational program on research integrity by an e-learning program or educational seminar by the time of their application are requested to declare the completion on the e-Rad application information entry screen.

- (2) For applicants who have not completed an equivalent program at their institution (including for applicants at their institution that do not have such a program)
 - a. If applicants have completed eAPRIN (former CITI) in the past JST project, etc.

Applicants who have completed eAPRIN (former CITI) at the time of application for JST projects are requested to declare the completion on the e-Rad application information entry screen.

b. Other than "a" above

Applicants who find it difficult to enroll in an educational program on research integrity because their institution does not offer such a program or for other reasons may enroll in and take the condensed version of the eAPRIN (former CITI) through JST. For instructions on enrolling in this program, visit the website of "Public Invitation of R&D Proposals":

R&D open-call website:

https://www.jst.go.jp/mirai/en/open-call/research/r04/

Applicants are requested to enroll in the program from the following URL: https://edu2.aprin.or.jp/ard/

No cost is incurred for attending the program, which takes about one to two hours to complete. Once enrolled, applicants are expected to attend and complete the program without delay, declare the completion of the program, and declare the completion and enter the completion confirmation document number certificate (7 digits + ARD*) in the e-Rad application information entry screen. * When the educational program is completed by August 2019, the number starts from Ref#.

 Contact for the Program on Research Integrity: Research Integrity Division, Department of Audit and Legal Affairs, JST E-mail: <u>rcr-kousyu@jst.go.jp</u> Contact for application:

Department of R&D for Future Creation, JST

- E-mail: <u>kaikaku_mirai@jst.go.jp</u>
- * Enter the project ID indicated on e-Rad, name of applicant, and project name.

Flow chart for declaring enrollment and completion of the educational Program on research integrity

After completing the program, declare completion and enter the certificate completion number in the e-Rad application information entry screen.

JST has required researchers participating in the R&D of this program to enroll in and complete the "eAPRIN (former CITI)." Since this requirement will remain unchanged in the FY2022, all participants of adopted R&D are required to enroll in and complete the eAPRIN (former CITI) in principle, except those who have already completed it at their institution or in a JST project.

4.2 Measures against unreasonable duplication and excessive

concentration

o Measures against unreasonable duplication

In the case where competitive funding is unnecessarily allocated from multiple sources such as the government or independent administrative corporations (including national R&D agencies; hereinafter the same) to the same researcher and same R&D project (in terms of its name or the content of R&D receiving competitive research funding) and any of the following applies, the R&D project may be excluded from the selection process of this program, the decision for approval canceled, or the costs reduced ("cancellation of approval, etc."):

· In the case where simultaneous proposals have been submitted for multiple sources of

competitive research funding, etc. and a duplicate approval has been granted for essentially the same R&D proposal (including heavily overlapping cases; the same shall apply hereinafter)

- In the case where a duplicate application is made for funding an R&D project that is essentially the same as another R&D project that has already been selected and received the competitive research funding, etc.
- In the case where there is an overlap of R&D costs for the same purpose in multiple R&D projects
- $\boldsymbol{\cdot}$ Other cases equivalent to the above

Even at the application stage of this project, no restriction is imposed on the application for other competitive funding program, etc. However, if the research project is selected by another competitive funding program, etc. it shall be conveyed promptly to the Department of R&D for Future Creation, JST. If there is any omission in this report, the approval decision for the research project may be revoked.

o Measures against excessive concentration

Even if the content of R&D proposed for this program differs from the content of R&D using another competitive research funding program, etc., measures such as the cancellation of approval may be put into motion in this program in the case where the overall research fund allocated to the same researcher or research group ("researcher, etc.") in the relevant fiscal year exceeds the limit of effective and efficient use, or cannot be consumed within the R&D period, and falls under any of the following,:

- The allocation of R&D fund is excessive in the light of the capabilities of the researcher, etc. and the research methods being used, etc.
- The allocation of R&D fund is excessive in comparison with the amount of effort allocated to the R&D project (the percentage of working hours required for conducting R&D to the total working hours (*))
- Unnecessarily expensive research equipment is purchased
- $\boldsymbol{\cdot}$ Other cases equivalent to the above

In the case where the content of entries in the proposal documents changed after being submitted to this program, etc., for example, as the same proposal was adopted by another competitive research funding program, this must be reported immediately to the administrative officer of this program. If reporting is omitted, the cancellation of approval, etc. may be put into motion.

* The total working hours of a researcher refer to not only the hours spent for research activities, but also the whole working hours including those for educational activities and management work

• Sharing of information on applications in order to eliminate unreasonable duplication and excessive

concentration

Information on part of the application contents will be shared among the sections that are in charge of other competitive research funding systems, including other ministries, through e-Rad in order to eliminate unreasonable duplication and excessive concentration.

oAppropriate reporting to affiliated institution

Please report to the affiliated institution appropriately regarding the necessary information to secure transparency in all research activities that you are involved, including information on research funds and side businesses, etc., donation, and support from facilities and equipment other than funds. Upon application, we will check for proper reporting to affiliated institution.

In addition, we may also request to affiliated institution for the confirmation of grasping and managing status of such information.

4.3 Status of acceptance of other applied competitive research funds, including of those of other ministries and agencies

If the entry on unreasonable overlap or excessive deconcentration differs from the facts, it may result in the rejection of the R&D project, cancellation of the adoption.

4.4 Measures against an improper use and improper receipt of funds

JST will respond strictly to an improper use and improper receipt of research funds (hereinafter referred to as an "improper use, etc.") as explained below.

OMeasures to be taken when an improper use, etc. of research costs is found

(i) Measures to cancel the agreement

For a research subject for which an improper use, etc. has been found, JST will cancel or change the consigned contract and request for return of all or part of the consignment expenses. In addition, JST may not enter into a contract for the next and subsequent fiscal years.

(ii) Measures to restrict eligibility for application and participation (*1)

If a researcher who has made an improper use, etc. of research funds of a project (including a researcher who has conspired; hereinafter referred to as a "researcher who made an improper use, etc.") or is accredited to have been involved in the improper use, etc. will be regarded as to have violated the duty of due care required of a prudent manager(*2), JST will restrict his/her eligibility for application for or participation in this project or give him/her a strict reprimand as shown in the following table, depending on the degree of injustice.

JST may provide the persons in charge of other competitive research funding programs, including those of other ministries, with a summary of the improper use, etc. (name of the researcher who has made the improper use, etc., project name, affiliated institution, R&D proposal, amount of budget, fiscal year of research, description of misconduct, and description of measures that have been taken). [This restricts the eligibility for application for and participation in other competitive research funding program, etc., including other ministries and agencies.]

- *1 The "application and participation" refers to proposal of or application for a new subject, new participation in research as a joint researcher, or participation in an ongoing R&D project (continued subject) as an R&D Principal Investigator or joint researcher.
- *2 "A researcher who has violated the duty of due care required of a prudent manager" refers to a researcher who was not recognized as being involved in an improper use, etc. but has violated the duty to conduct the project with the attention of a prudent manager.

Classification of improper use or improper receipt	Degree of improper use		Application prohibited period *3
	1 Personal	use for personal gain	10 years
Those researchers who	2 Other that above	①Major influences on society, or strongly aggravated	5 years
any researchers colluding in the said improper use *1		②Improper use other than ① or ③	2 – 4 years
		③Minor influence on society, or weakly aggravated	1 year
Those researchers awarded competitive research funding, etc. through false or other improper means and any researchers colluding in the said improper use			5 years
Those researchers who were not involved in the improper use but were in violation of the requirement to exercise the duty of due care required of a prudent manager *2			A minimum of 1 year to a maximum of 2 years according to the researcher's degree of due care required of a prudent manager

In the following case, JST gives a strict reprimand, instead of restricting eligibility for applications and participation.

- *1 In the case of 1, the act has minor impact on society and is determined to be less vicious and the degree of improper use is small.
- *2 In the case of 2, the act has minor impact on society and is recognized as less vicious
- *3 In principle, the application restriction period will be calculated from the following year that the year when unauthorized use was recognized and research funds were returned. Furthermore, eligibility for participation will be restricted for the fiscal year when unauthorized use was recognized.

(iii) Publication of fraudulent case

For the researchers, who have made an improper use and the like of research funds and violated the duty of due care required of a prudent manager in this project, are subject to restrictions on eligibility for application for and participation in it. JST will publicly disclose the overview of the fraudulent case (researcher name, project name, affiliated institution, fiscal year of research, description of misconduct, and description of measures that have been taken). The overview of the fraudulent case (project name, affiliate institution, fiscal year of research, content of misconduct, and description of measures that have been taken) is also released, in principle, by the Ministry of Education, Culture, Sports, Science and Technology (MEXT).

"Guidelines for Management and Audit of Public Research Funds in R&D institutions (Implementation Standards)" states that if the misconduct is found and determined as a result of the survey, the R&D institution is required to announce the survey results promptly. Each institution should act properly in accordance with the guidelines.

* For the outline of the misconduct cases currently published on the website of MEXT, please refer to the following website.

https://www.mext.go.jp/a_menu/kansa/houkoku/1364929.htm (Japanese version only)

4.5 Measures taken against researchers whose eligibility for

application and participation have been restricted due to other

competitive research funding program, etc.

The researchers who have been subject to the restriction due to the improper use, etc. of R&D funds in other competitive research funding program, etc.* managed by including those of other ministries are also restricted on their eligibility for application to and participation in this program while their right to apply is restricted in other competitive research funding program, etc.

The other competitive research funding program, etc. also include the program that will start open invitation from FY2022. The measures also apply to the program terminated before FY2021.

* For the actual list of programs, etc. subject to these measures, visit the following website: https://www8.cao.go.jp/cstp/compefund/ (Japanese version only)

4.6 Measures taken against violation of related laws and regulations

If R&D is conducted in violation of applicable laws, regulations or guidelines, disposal and/or penalties are imposed on the project pursuant to the related law or regulation, and R&D costs may be suspended, or the decision to allocate R&D costs cancelled.

4.7 Carryover

If the R&D institution finds it difficult to finish spending its research fund within the fiscal year along with the progress of the project due to difficulties in prior investigation or determination of research methods, various conditions related to planning or design, weather conditions, difficulties in obtaining materials or for other unavoidable reasons, JST may allow the research fund to be carried over to the

end of the next fiscal year for contracts that continue into the next fiscal year.

4.8 Cross-ministerial cost categorization table

In this program, the cost structure is determined based on the cross-ministerial cost categorization table that is to be commonly used for competitive research funds. For the handling of costs, please refer to the following cross-ministerial cost categorization table.

https://www.jst.go.jp/contract/download/2021/2021mirais309betsu.pdf (Japanese version only) In response to the "6th Science, Technology, and Innovation Basic Plan" and the "Integrated Innovation Strategy 2021" and the "Comprehensive package to strengthen research capacity and support young researchers," the system for competitive research funding is being improved. Based on this, the project is intended to subsidize an R&D Principal Investigator (PI) in the payment of personnel cost and costs for delegated work other than research (buyout costs) from direct costs. Regarding the payment of a PI's personnel cost and costs for delegated work other than research (buyout costs), check the below for requirements.

o"Introduction of a buyout system to make it possible to pay delegated-work costs (costs for nonresearch work delegated to others) from direct costs and the payment of PI personnel cost from direct costs (correspondence)" (September 17, 2020)"

https://www.jst.go.jp/osirase/2020/pdf/20200917.pdf (Japanese version only)

o"Correspondence of the JST-Mirai Program regarding "personal expense spending of PI from direct expenses"" (January 13, 2021).

https://www.jst.go.jp/mirai/jp/uploads/manual/pi_houshin.pdf (Japanese version only)

"Correspondence of the JST-Mirai Program regarding "Review to allow expenses on behalf of non-research work to be paid out from direct expenses (buyout system introduction)"" (January 13, 2021).

https://www.jst.go.jp/mirai/jp/uploads/manual/buyout_houshin.pdf (Japanese version only)

4.9 Diversion of cost among items

For diversion of cost among the items, the amount of diversion permitted without JST approval is capped at 50% of the total direct costs.

4.10 Securing R&D period up to the end of fiscal year

JST takes the following measures for all the competitive research funds so that researchers can conduct R&D until the end of the fiscal year.

(1) JST will confirm it and perform acceptance inspection of the R&D results.

(2) The deadline for submitting the accounting performance report shall be May 31.

(3) The deadline for submission of the R&D results report shall be May 31.

Each R&D institution should strive to establish a necessary system based on the understanding that these measures are taken to secure the R&D period which ends at the end of the fiscal year.

4.11 Storage of receipts pertaining to indirect costs and report on actual

use

R&D institutions that receive allocated indirect costs are requested to manage them properly and store documents, such as receipts, that prove their appropriate use for five years from the fiscal year following the fiscal year of project completion.

R&D institutions that have received the allocated indirect costs should report their actual use for each fiscal year by June 30 of the next fiscal year to JST through the cross-ministerial R&D Management System (e-Rad) (R&D institutions that have acquired multiple competitive funds are requested to report all the indirect costs relevant to them). If you do not know how to operate e-Rad for reporting, refer to e-Rad Operation Manual (https://www.e-rad.go.jp/manual/for_organ.html (Japanese version only)) or "Frequently Asked Questions" (http://faq.e-rad.go.jp (Japanese version only)).

4.12 Promoting the joint use of research facilities and equipment

"About reforming competitive research expenses toward sustainable creation of research achievements (mid-term summary)" (Committee for reforming competitive research expenses, June 24, 2015) considers it proper to share relatively large facilities and equipment for universal use while aiming to fully achieve the research objectives.

In addition, "Comprehensive package to strengthen research capacity and support young researchers" (Council for Science, Technology and Innovation, January 23, 2020) and "6th Science, Technology, and Innovation Basic Plan" (approved by the Cabinet on March 26,2021) also calls for the promotion of the maintenance and sharing of research equipment and facilities, the establishment of a system for the systematic introduction, renewal, and utilization of research facilities (core facilities), and the formulation and publication of sharing policies.

Based on these, R&D institutions are requested to promote joint use of research facilities and equipment purchased by this program, in particular, large and versatile ones, so as not preclude the performance of R&D proposals. Such purchase shall be made within control conditions of other research costs and in accordance with joint use system in the affiliated institution. The use of facilities and equipment purchased with other research funds and purchase or use with combined multiple research funds shall also be actively promoted. Note that the management of shared facilities and equipment should be balanced with their use to achieve the purposes of the R&D proposals.

Besides the above joint use system, R&D institutions are requested to collaborate actively with joint use systems such as the "University Collaborative Research Facility Network Project" managed by inter-university R&D institution, National Institutes of Natural Sciences with the aim of mutual use of equipment throughout the nation, as well as the "Program for supporting introduction of the new sharing system" and "Core facility construction support program" used by universities to promote the joint use of research facilities and equipment beyond the framework of research organizations and R&D institutions.

https://www.jst.go.jp/shincho/program/pdf/sinkyoyo_brochure2020.pdf (Japanese version only)

4.13 Improving the treatment of doctoral students

In the ""6th Science, Technology, and Innovation Basic Plan" (cabinet decision on March 26, 2021), in order to attract excellent students and working adults from home and abroad, this plan is set a numerical target to improve financial support for graduate students, especially doctoral students, and to increase the number of doctoral students receiving an amount equivalent to living expenses by three times (equivalent to about 30% of students enrolled in the doctoral program receiving the substantial amount to living expenses); it is described as "in order to promote the payment of salaries to doctoral students at an appropriate level as a research assistant (RA) from competitive research funds and joint research funds, the government will formulate rules for the payment of RA expenses relating to employment and remuneration for RAs at each business and university, and implement them sequentially from FY2021", and expanding employment and improvement of treatment for doctoral students are expected as RA at universities and R&D corporations.

The "Guideline for the Employment and Education of Post-Doctoral Researchers" (Committee on Human Resources, the Council for Science and Technology, December 3, 2020) states that "Post-doctoral course students are also researchers in a sense, and therefore ensuring an environment and support system suitable for them is an important duty of the universities nurturing them," "it is especially important to set rewards according to the nature and contents of their work, pay them salaries according to their work hours under an appropriate work management and appropriately assess their research contribution," and "it is necessary at universities and other institutions that an applicant for a competitive research funding can request the subsidization of research assistant (RA) employment cost as a direct cost and also to review school provisions so that appropriate rewards are provided to RAs."

Based on these, it is recommended that doctoral course students necessary for implementing R&D

in the project be proactively employed as RAs, unit prices be set according to the nature and contents of their work and their salaries be paid according to work hours under an appropriate work management. When applying for this program, you should include the amount of salary paid to these doctoral students in the financial planning.

In the "6th Science, Technology, and Innovation Basic Plan" (cabinet decision on March 26, 2021), the amount equivalent to living expenses received by doctoral students is considered to be 1.8 million yen per year or more. In addition, in order to focus on research without financial concerns for excellent doctoral students, this plan will greatly expand the number of beneficiaries receiving about 2.4 million yen per year that is equivalent to DC with a research grant. Regarding the treatment of post-doctoral students for implementing the research project, the "Guideline for the Employment and Education of Post-Doctoral Researchers" states that "considering the average salary of specially appointed assistant professors employed through competitive research funds, an hourly payment of 2,000 to 2,500 yen² should be the standard salaries of such students."

- The actual amount of salary and payment period will be decided by the R&D institution. It does not limit payment above or below the above levels.
- When hiring students as RAs, etc., you need to avoid excessively long working hours and consider the balance between the work and study/learning time of doctoral students.

4.14 Ensuring self-sustaining, stable research environment for young researchers

The importance of securing a term of about 5 years or more for the fixed-term post assigned to research assistants and postdocs. etc.is pointed out in "Research Ability Improvement Reform" (Ministry of Education, Culture, Sports, Science and Technology, April 23, 2019) and "Development of Science, Technology and Innovation Policies for Knowledge-based Value Creation - Leading the World by Realizing Society 5.0 - Final summary" (The Special Committee on Comprehensive STI Policy, Council for Science and Technology, March 26, 2020) because short-term employment could be an obstructive factor in career development.

In regard to national university corporations and inter-university research institute corporations, "Guidelines for reform of personnel and salary management in national university corporations, etc. ~Toward building attractive personnel and salary management effective for improving education and research capabilities~" (Ministry of Education, Culture, Sports, Science and Technology, February 25, 2019) states "To meet two requirements, "fostering young teachers and securing stable employment," it is desired to promote an institutional design which takes into account the development of researchers while maintaining mobility, for example, by securing a certain period of employment, in

² Considering the average salary of specially appointed assistant professors employed by competitive research funds, etc., it is likely that the standard payment of an hourly wage is about 2,000 to 2,500 yen in the case of doctoral programs. (In the "Survey on Employment Status of Faculty Members at Research Universities (preliminary report)" (Japanese version only) published in August, 2020, for the amount in the category (between 400,000 yen or more and less than 450,000 yen) where the median monthly salary of specially appointed assistant professors exist, it is calculated by dividing the number of working hours (7 hours 45 minutes to 8 hours) by the number of actual working days (19 to 20 days) excluding holidays, etc., and then multiplying by 0.8 in consideration of the doctoral student status.

the order of 5 to 10 years, even in fixed-term posts using highly flexible expenses such as indirect costs or donations."

Based on these points, when the project in this program hires young researchers such as research assistants or postdocs, a certain period of employment (5 years or more) should be ensured as much as possible with an attempt to secure the period up to the stage-gate as the length of term by using external funds including indirect costs, basic research funds and donations, etc. while making confirmation with the personnel and accounting staff at the administrative departments.

4.15 Voluntary research activities of young researchers employed for implementing the project

On the basis of the "Policies for the Voluntary Research Activities of Young Researchers Employed for the Implementation of the Project with Competitive Research Funds" (policies concerning competitive research funds—policies agreed to at a liaison meeting of related ministries and agencies on December 18, 2020), when an R&D Principal Investigator (PI) judged that the employment of young researchers for a JST competitive research fund project will not become an obstacle to the promotion of the project and will rather contribute to its promotion and has obtained approval from the R&D institution to which the PI belongs. The PI can receive personnel cost from the project fund and allocate part of his/her efforts for the project to such activities that will contribute to the improvement of their voluntary research activities as well as research & management capabilities. Please see below for details.

 Regarding the voluntary research activities of young researchers employed for implementing the project (correspondence)" (April 10, 2020)

https://www.jst.go.jp/osirase/2020/pdf/20200414.pdf (Japanese version only)

- "Regarding the JST-Mirai program in the 'Policies for the Voluntary Research Activities of Young Researchers Employed for the Implementation of the Project with Competitive Research Funds" (August 14, 2020)
 - https://www.jst.go.jp/mirai/jp/uploads/manual/senjukanwa_houshin.pdf (Japanese version only)

4.16 Supporting various career paths for young researchers

In "Basic Policy for Supporting Various Diverse Career Paths of Young Post-doctoral Researchers Employed with Public Research Funds of the Ministry of Education, Culture, Sports, Science and Technology (MEXT)" (Human Resources Committee, Council for Science and Technology, December 20, 2011), it is requested that public R&D institutions employing young post-doctoral researchers with public research funds and R&D principal investigators should actively work for young post-doctoral researchers to secure various career paths in Japan and abroad. Additionally, in the "6th Science, Technology, and Innovation Basic Plan" (cabinet decision on March 26, 2021), the goal for the "expansion of career paths/mobility to the industrial sector" is being set. In addition to the "Guidelines for Employment and Training of Postdoctoral Fellows" (Japanese version only. Council for Science and Technology Human Resource Commission on December, 3, 2020), it is stated as "doctoral

students with high expertise and excellent research skills can be active in various places of society including venture companies and global companies, creating innovation is essential, and efforts to diversify career paths after the end of the postdoctoral period are important. Based on the understanding of these circumstances, when the R&D project, adopted by this program, employs young researchers such as special-appointment or post-doctoral researchers with allocated public research funds (competitive research funds, other project research funds, or public research funds for universities), special efforts for supporting these researchers to obtain diverse carrier paths are requested. Use of indirect costs for these efforts may be considered.

4.17 Securing management personnel of URA, etc.

In the "6th Science, Technology, and Innovation Basic Plan" (cabinet decision on March 26, 2021), the importance of efforts to ensure professional quality and improve treatment has been pointed out for making URA and other management personnel to be attractive positions. In addition, it indicates in need of establishing career paths for management personnel, URA and engineers, etc., in the "comprehensive package to strengthen research capacity and support young researchers" (Council for Science, Technology, and Innovation on January 23, 2020).

Based on these, when management personnel employed by research institution, or newly hired URA, etc., is engaged in the management of this research program, it is not limited to this program, research institutes should secure a term of office for a certain period (about 5 years or more) as much as possible by utilizing indirect expenses, basic expenses, donations, etc., of other external funds.

At the same time, as support for securing career paths of the management personnel, please take positive efforts for participating in URA training, etc. Please consider utilizing indirect costs for such efforts.

4.18 Security export control (to prevent technology leakage to foreign countries)

A lot of cutting-edge technologies are being researched at R&D institutions, and in particular at universities, there is heightened risk of leakage of leading-edge technologies, as well as materials and equipment used for research, due to an increase of foreign students and researchers through internationalization, which has increased the risk of these technologies being exploited for the development and manufacture of weapons of mass destruction, etc. In order for R&D institutions to carry out various R&D activities, including contract R&D, they are required to take systematic responses to ensure that R&D results that may be diverted militarily are not passed on to those who may perform these activities, such as developing of weapons of mass destruction for terrorist groups.

In Japan, based on Foreign Exchange and Foreign Trade Act (Act No. 228 of 1949) (hereinafter referred to as the "Foreign Exchange Law"), export restrictions (*) are in place for the purpose of maintaining international peace and security. This, in principle, requires those who intend to export (provide) freight or technologies regulated by the Foreign Exchange Law to obtain approval from the Minister of Economy, Trade and Industry. Research institutions are required to comply with the foreign exchange law, as well as the country's laws and regulations, guidelines and notifications. If they conduct R&D in violation of relevant laws and regulations or guidelines, they are subject to termination

of research funding allocation or revoking of the decision on research fund allocation, besides legal dispositions and penalties.

- * Currently, Japan's security export control system is based on internal agreements, etc., it mainly consists of two parts below;
 - (1) in principle, permission from the Minister of Economy, Trade and Industry is required in case of attempting to export (provision) of cargo (technology) with specifications and functions above a certain level among the items listed in the Appended Table 1 of the Export Control Order and Foreign Exchange Order,
 - (2) a system that requires a permit from the Minister of Economy, Trade and Industry (catchall regulation) in cases of attempting to export (provision) of cargo (technology) that do not fall under the listed regulations and there is a risk of military diversion (use requirement and consumer requirement, or inform requirement)

Not only the export of goods but also the provision of technology is also subject to the regulation of the Foreign Exchange Law. Providing technologies subject to the List Regulatory to non-residents (After May 1, 2022, residents who fall under a specific type (*) are included.) or those in foreign countries requires prior permission. Provision of technology includes providing technical information, such as design drawings, specifications, manuals, samples and prototypes in storage media, such as paper, e-mail, CD, DVD, or USB memory and providing work knowledge through technical guidance, training or technical assistance in seminars. Acceptance of foreign students from foreign countries, and activities, such as joint research, may also involve many exchanges of technologies that may be subject to foreign exchange law. Please note that export (provision) of technology, etc. acquired through this program may also be subject to regulations.

* It refers to a type of resident who is strongly influenced by non-residents "transactions or acts providing technology that requires permission based on the regulations of Foreign Exchange and Foreign Trade Law, Article 25, Paragraph 1, and the Foreign Exchange Order, Article 17, Paragraph 2". Refers to the specific type specified in 1. (3) \forall 1) \sim 3

In addition, based on the Foreign Exchange Law, it is necessary to establish a security trade management system in case of exporting list-regulated cargo or providing list-regulated technology to foreign countries (*). Therefore, by the time the contract is concluded, the confirmation process for control system may be conducted whether the export of cargo and technology that are subject to the export restrictions under the Foreign Exchange and Foreign Trade Law are planned to be exported by this program and if there is an intention to export. If there is an intention to export, or the end of this program. The confirmation status may be reported to the Ministry of Economy, Trade and Industry upon request by the Ministry of Economy, Trade and Industry. If any regulatory infringement of acquired technology, etc., through this program related to the Foreign Exchange Law is found, all or part of the contract may be cancelled.

* Exporters, etc. are obliged to comply with the "Standards to Be Complied with by Exporters, etc." stipulated in the Foreign Exchange Law, Article 55-10, Paragraph 1. In addition, the security export control system here is based on the management system in "Standards to Be Complied with by

Exporters, etc.", the internal control system of an organization to prevent unauthorized exports, etc. by appropriately exporting list-regulated cargo or providing list-regulated technology to foreign countries.

The details of security export control are disclosed on websites, such as of the Ministry of Economy, Trade and Industry. For details, refer to the following.

- Ministry of Economy, Trade and Industry (METI): Security Export Control (general) https://www.meti.go.jp/policy/anpo/ (Japanese version only)

 Ministry of Economy, Trade and Industry: Security export control guidance (introduction) https://www.meti.go.jp/policy/anpo/guidance.html

4.19 Strict implementation of United Nations Security Council Resolution No. 2321

On November 30, 2016 (local time in New York), the United Nations Security Council (hereinafter referred to as the "Security Council"), in response to the nuclear test conducted by North Korea in September, 2016 and its repeated ballistic missile launches, the Security Council adopted Security Council Resolution No. 2321 that significantly adds and strengthens sanctions against North Korea.

In this regard, the Ministry of Education, Culture, Sports, Science and Technology (MEXT) issued "Strict Implementation of United Nations Security Council Resolution 2321 (Request)" to the relevant organizations dated on February 17, 2017.

"Science and technology cooperation" in the main text of the resolution 11 includes all cooperation except for the purpose of medical exchange, not limited to the technology regulated by the Foreign Exchange Law. It is important for research institutes to keep in mind the strict implementation of this resolution in case of conducting various research activities including the commissioned research.

Please see below for Security Council Resolution No. 2321.

 Ministry of Foreign Affairs: United Nations Security Council Resolution No. 2321, Japanese translation (Ministry of Foreign Affairs Notification No. 463 (issued on December 9, 2016)) https://www.mofa.go.jp/mofaj/files/000211409.pdf

4.20 Promoting dialogue and collaboration with the public

In the promotion of "Science and Technology Dialogue with the Nation" (basic initiative policy) (decided by the Minister of State for Science and Technology Policy and a member of the Diet on June 19, 2010), in order to continuously produce excellent results in science and technology for further development in Japan, it is considered essential to return the results of science and technology to the nation, and to have the understanding and support from the nation for promoting science and technology together. If it is adopted in this Call for Proposal (call) and receives an annual allocation of 30 million yen or more for public research funds, we request that you actively engage in "scientific and technical dialogue with the nation" such as public lectures on R & D results, symposiua, continuous distribution of R & D results on the Internet, and round table meetings involving various stakeholders.

https://www8.cao.go.jp/cstp/kihonkeikaku/5honbun.pdf (Japanese version only)

4.21 Open Access and Research Data Management

JST shows the basic policy regarding the handling of research results for the open science promotion. This policy defines the basic approach to the open access of research papers and the storage, management, and publication of research data in research activities under JST program.

In principle, researchers participating in this program are required to make their research papers publicly available through institutional repositories and publications that are open access based. Based on the data policy of the research institution, a data management plan describing the policy and plan for the storage, management, publication, and non-publication of research data generated as a result of research activities shall be prepared, submit to JST together with the research plan, and carry out research activities after storing, managing, and disclosing research data based on this plan.

Refer to the following for more details.

- JST's basic policy regarding the handling of research results for the open science promotion https://www.jst.go.jp/all/about/houshin.html#houshin04 (Japanese version only)
- JST's basic policy operational guidelines regarding the handling of research results for the open science promotion
 - https://www.jst.go.jp/pr/intro/openscience/guideline_openscience.pdf (Japanese version only)

JST will analyze statistical data such as the number of data modules, type of data, type of release, and storage location for the purpose of understanding the contents of the description, providing support to researchers, and reflecting (revising) the information in the basic policy. We will assume that the statistical data analyzed may be made public, but we will not release any individual personal data, names, or other information that can be used to identify individuals.

* For life science data, please also refer to "4.22 Releasing data from National Bioscience Database Center".

4.22 Releasing data from National Bioscience Database Center

The National Bioscience Database Center (NBDC) (https://biosciencedbc.jp/) was established in the Japan Science and Technology Agency in April 2011 to promote integrated use of life sciences databases created by various research institutions. "Progress of Life Sciences Database Integration Promotion Project and Future Directionality" (January 17, 2013) states that the center will play a central role in expanding the target projects receiving data and services from the database.

Based on the understanding of these circumstances, researchers are requested to cooperate in publishing the following types of data obtained from this project and databases

No.	Data type	Publication destination	Publication URL
1	Overview of public database that has been built	Integbio Database Catalog	https://integbio.jp/dbcatalog/
2	Copies of data related to the results published in the papers	Life Science Database Archive	https://dbarchive.biosciencedbc.jp/
3	Data related to human of above 2	NBDC Human Database	https://humandbs.biosciencedbc.jp

<Contact information>

National Bioscience Database Center, Japan Science and Technology Agency Phone: 03-5214-8491

e-mail: nbdc-kikaku@jst.go.jp

4.23 Systematic numbering in acknowledgments of papers

When announcing R&D results obtained in this program, you must indicate that R&D was funded by JST.

In the case of a paper presentation, please include "JST-Mirai Program Grant Number <10-digit systematic number>" in the Acknowledgment. If there is any other method to be decided by the submitting organization, please enter the information accordingly. The 10-digit systematic number of this program is <JPMJMI + 4-digit assignment number>. The systematic number will be announced at the time of adoption.

The following examples show the acknowledgment of the paper:

[English]

This work was supported by JST-Mirai Program Grant Number JPMJMIxxxx.

[Japanese]

本研究は、JST 未来社会創造事業 JPMJMIxxxx の支援を受けたものです。

* When two or more programs are related to the paper, all the related program names and systematic numbers should be written.

4.24 Research Support Service/Partnership Certification System (A-PRAS)

In the "Science and Technology Innovation Policy Development for Knowledge Intensive Value Creation - Toward a World Leading Nation through the Society 5.0 Realization - Final Summary" (Council for Science and Technology Policy/General policy Special Committee on March 26, 2020), it is as to "research support and return of research results to society that were conducted by the government as public program, the formation of a new public private partnership mechanism is required in keeping with the emerging the startups that have strong feelings and passion as businesses".

Under such circumstances, MEXT established the "Accreditation System for Partnership for Research Support Services (A-PRAS)" in 2019. This system is to improve the research environment for researchers, accelerate the science and technology promotion and the creation of innovation in Japan, and aim to support the development of various efforts related to research support serves through the recognition of "Research support service/partnership" that meet certain requirements by the Minister of Education, Culture, Sports, Science and Technology within the research support services provided by private business operators. Nine services have been certified by 2020.

Details of each certified service can be found on MEXT webpage below. Please utilize it. https://www.mext.go.jp/a_menu/kagaku/kihon/1422215_00001.htm (Japanese version only)

 "Science and Technology Innovation Policy Development for Knowledge Intensive Value Creation
 Toward a World Leading Nation through the Society 5.0 Realization - Final Summary" (Council for Science and Technology Policy/General policy Special Committee on March 26, 2020) https://www.mext.go.jp/b_menu/shingi/gijyutu/gijyutu22/houkoku/1422095_00001.htm (Japanese version only)

4.25 Reforming competitive research funds

Currently, the government is discussing institutional improvement of competitive research funds for more effective and efficient use of R&D costs based on the "6th Science, Technology, and Innovation Basic Plan", "Integrated Innovation Strategy 2021" and "Comprehensive package to strengthen research capacity and support young researchers.". If the government indicates a policy for the institutional improvement and operation common to other competitive funding program during the open call period, we will inform you when applying the policy to the open call and operation.

4.26 Guidelines for Management and Audit of Public Research Funds in R&D institutions (Implementation Standards)

(1) About implementation of proper systems in accordance with the "Guidelines for Management and Audit of Public Research Funds in R&D institutions (Implementation Standards)"

R&D institutions applying for this project and conducting R&D should comply with the contents of the "Guidelines for Management and Audit of Public Research Funds in R&D institutions (Implementation Standards)" (revised on February 1, 2021) *1.

R&D institutions are requested to establish a system for managing and auditing research funds under their responsibility in accordance with the above-mentioned guidelines and strive for proper execution of research funds. If the Ministry of Education, Culture, Sports, Science and Technology (MEXT) finds the system implementation of an R&D institution inadequate as a result of investigation of the status of system implementation in accordance with the above-mentioned guidelines, it may take measures, such as reduction in the indirect costs of all the competitive research funds distributed from the Ministry of Education, Culture, Sports, Science and Technology and the independent administrative corporations under its jurisdiction.

*1 For "Guidelines for Management and Audit of Public Research Funds in R&D institutions (Implementation Standards)," visit the following website (Japanese version only): https://www.mext.go.jp/a_menu/kansa/houkoku/1343904_21.htm

(2) Submission of "Self-evaluation Checklist for Implementation of Proper Systems" based on "Guidelines for Management and Audit of Public Research Funds in R&D institutions (Implementation Standards)"

Before concluding an agreement for this program, each R&D institution is requested to establish a system for managing and auditing R&D costs in accordance with the above-mentioned guidelines, and submit "Self-evaluation Checklist for Implementation of Proper Systems" (hereinafter referred to as the "checklist"), and a report indicating the status of system implementation. (The R&D institution that fails to submit the checklist cannot conduct R&D.)

After April 1, 2022, please download the 2022 version checklist form from the e-Rad after confirming the contents of the following web page, fill in the required information, and submit the checklist to MEXT (Competitive Research Fund Coordination Office, Research and Development Infrastructure Division, Science and Technology Policy Bureau) from R&D institutions via e-Rad by the designated date prior to the R&D Agreement conclusion.

Research institutes that have submitted the 2021 version checklist will be accepted regardless of the above, but in this case, please submit the 2022 version checklist by December 1, 2022.

It is not necessary to submit a checklist for institutions that do not receive competitive research funding from MEXT and the incorporated administrative agencies under the jurisdiction of MEXT.

Please refer to MEXT web page below for details on how to submit the checklist. (The following web pages are related to the FY2021 version checklist, so please refer to the MEXT web page in FY2022.)

https://www.mext.go.jp/a_menu/kansa/houkoku/1324571.htm (Japanese version only)

* <u>ATTN: It is essential to prepare the available environment of e-Rad for submission. Please</u> note that it usually takes about 2 weeks for a research institution registration into e-Rad. Refer to the following web page for details on the procedures for using e-Rad.

https://www.e-rad.go.jp/organ/index.html

Since the guideline includes the viewpoint of "promotion of information transmission/sharing", we request that you post your efforts for fraud prevention on the websites of R&D institutions and disseminate information actively.

4.27 Guidelines for Responding to Misconduct in Research

(1) About implementation of proper systems in accordance with "Guidelines for Responding to Misconduct in Research"

R&D institutions are requested to comply with the "Guidelines for Responding to Misconduct in Research" (Adopted by the Minister of Education, Culture, Sports, Science and Technology, August 26, 2014)^{*1} before applying for this project and performing R&D activities.

If the Ministry of Education, Culture, Sports, Science and Technology (MEXT) finds the system implementation of an R&D institution inadequate as a result of investigation of the status of system implementation in accordance with the above-mentioned guidelines, it may take measures, such as reduction in the indirect costs of all the competitive research funds distributed from Ministry of Education, Culture, Sports, Science and Technology and the independent administrative corporations under its jurisdiction.

*1 For "Guidelines for Responding to Misconduct in Research," please visit the following website: https://www.mext.go.jp/b_menu/houdou/26/08/1351568.htm (Japanese version only)

(2) About submission of the checklist on the status of efforts in accordance with "Guidelines for Responding to Misconduct in Research"

Each R&D institution needs to submit the checklist on the status of implementation in accordance with "Guidelines for Responding to Misconduct in Research" (hereinafter referred to as the "Research Misconduct Checklist"). (The R&D institution that fails to submit the checklist cannot conduct R&D activities)

After April 1, 2022, please download the 2022 version of research fraud checklist form for the from the e-Rad after confirming the contents of the following web page, fill in the required information, and submit the checklist to MEXT (Competitive Research Fund Coordination Office, Research and Development Infrastructure Division, Science and Technology Policy Bureau) via e-Rad by the designated date prior to the R&D Agreement conclusion.

Research institutes that have submitted the 2021 version of research fraud checklist will be accepted regardless of the above, but in this case, please submit the 2022 version of research fraud checklist by September 30, 2022.

It is not necessary to submit a checklist for institutions that do not receive competitive research funding from MEXT and the incorporated administrative agencies under the jurisdiction of MEXT.

Please refer to the web page below for a research fraud checklist. (The following web pages are related to the FY2021 version checklist, so please refer to the MEXT web page in FY2022.)

https://www.mext.go.jp/a_menu/jinzai/fusei/1420301_00001.htm (Japanese version only)

* <u>ATTN: It is essential to prepare the available environment of e-Rad for submission. Please</u> note that it usually takes about 2 weeks for a research institution registration into e-Rad. Refer to the following web page for details on the procedures for using e-Rad.

https://www.e-rad.go.jp/organ/index.html

(3) About measures against misconduct in research activities in accordance with "Guidelines for Responding to Misconduct in Research"

JST will respond strictly to any misconduct found in the research activities in this program as follows:

(i) Measures to cancel the agreement

If a specific misconduct, such as fabricating, tampering or plagiarism, is found in a R&D proposal of this project, JST will cancel or change the contract R&D agreement and request for refunding of all or part of the contract R&D costs, depending on the nature of the misconduct. JST may not enter into a contract for the next and subsequent fiscal years.

(ii) Measures to restrict eligibility for application and participation

For a person involved in a specific misconduct in research papers or reports in this project or a person who is determined to have neglected the duty of care as a person responsible for the papers, reports, etc., although they cannot be determined to have been involved in the misconduct, JST will restrict eligibility for application for or participation in this program, depending on the degree of viciousness and responsibility for the specific misconduct.

If JST takes measures to restrict eligibility for application and participation, JST provides the information to persons in charge of competitive research funds distributed from Ministry of Education, Culture, Sports, Science and Technology and the independent administrative corporation under its jurisdiction (hereinafter referred to as "MEXT-related competitive research funding programs") and to those in charge of competitive research funds distributed from other ministries and agencies and the independent administrative corporation under their jurisdiction (hereinafter referred to as "other ministry-related competitive research funding programs"). This may also result in restrictions on eligibility for application for and participation in the Ministry of Education, Culture, Sports, Science and Technology and other ministry-related competitive research funding programs").

Applicants subject to restrictions on application due to a specific misconduct			Level of specific misconduct	Application prohibited period (From the fiscal year following the fiscal year in which the misconduct is found *)
Persons involved in a specific misconduct	1. Malicious person who intends to conduct a specific misconduct from the beginning of the research			10 years
	2. Author of a paper from a research where a specific misconduct	Author who is responsible for such a paper (Supervisor, representative author, or a person	Misconduct having a major impact on the progress of research in this field or society, or considered to be highly malignant	5-7 years

Chapter 4 Key Points for Application

	was committed	deemed to have equivalent responsibilities)	Misconduct having a minor impact on the progress of research in this field or society, or considered to be less malignant	3-5 years
		Author other than the above	2-3 years	2-3 years
	3. Any person involved in a specific misconduct excluding that set forth in 1 and 2.			2-3 years
An author who is not responsible for a specific misconduct but is responsible for papers from a research in which a specific misconduct was committed (Supervisor, representative author, or a person deemed to have equivalent responsibilities)			Misconduct having a major impact on the progress of research in this field or society, or considered to be highly malignant	2-3 years
			Misconduct having a minor impact on the progress of research in this field or society, or considered to be less malignant	1-2 years

* In principle, the application restriction period will be calculated from the following fiscal year that was determined the specific fraudulent activity. Eligibility for participation is also restricted for the fiscal year in which a specific misconduct is determined as such

(iii) Measures against researchers who have been subject to restrictions on their eligibility for application for the competitive research funding program, etc. and for basic expenses

For researchers whose eligibility for application and participation have been restricted due to a specific misconduct in research activities that receive MEXT-related competitive research funds, operating costs subsidies provided to national university corporations, Inter-University R&D institution Corporation and independent administrative corporations under the jurisdiction of the Ministry of Education, Culture, Sports, Science and Technology, private school subsidies or other basic expenses, or other ministry-related competitive research funds, JST will restrict eligibility for application and participation in this program.

(iv) Publication of misconduct case

If a researcher committed misconduct in the R&D activities in this program, JST will publish the outline (researcher name, project name, affiliated institution, fiscal year of research, description of misconduct, and description of measures that have been taken) of the misconduct case. The description of misconduct case (name, type, research field and outline of misconduct case, name of expenses involved in misconduct, measures that were taken by an R&D institution and by

funding agency) are also, in principle, published by the Ministry of Education, Culture, Sports, Science and Technology (MEXT).

The above-mentioned guidelines state that if it is determined that misconduct has been found, R&D institutions shall publish the results of investigation promptly. The R&D institutions are requested to respond properly.

https://www.mext.go.jp/a_menu/jinzai/fusei/1360483.htm (Japanese version only)

4.28 Mandatory education on research integrity and compliance

Researchers who are to participate in an R&D project in this program shall receive education on research integrity to prevent misconducts in research activities, as stipulated in "Guidelines for Responding to Misconduct in Research," and education on compliance stipulated in "Guidelines for Management and Audit of Public Research Funds in R&D institutions."

During the conclusion of a contract R&D agreement after adopting a R&D proposal, the R&D principal investigator must submit a document that confirms that all researchers who are to participate in the R&D project for this program have received education on research integrity and compliance, and have understood the contents.

4.29 Handling of information for Research and Development proposal

(R&D proposal) entry matters, etc.

The information contained in the R & D proposal and other documents submitted at the time of proposal, including personal information, will be used for screening for adoption. In addition, please note that this information, including personal information, may be used for statistics and analysis of research trends that contribute to JST's program operations. From the perspective of maintaining the profits of the R&D applicant, we will keep the application contents strictly.

Personal information contained in the R & D proposal and other documents submitted at the time of proposal will be managed appropriately in accordance with the "Act on the Protection of Personal Information" and other related laws and regulations. When offering the above-mentioned statistics and results of the analysis to a third party as necessary, the specific information will be processed for protecting personal information unless the consent of the person is obtained in advance.

oHandling of information, such as research proposals, on e-Rad

OProviding information to the Cabinet Office through e-Rad

In the "6th Science, Technology, and Innovation Basic Plan" (cabinet decision on March 26, 2021), EBPM for policy making based on objective evidence is to be thoroughly implemented, and the information registered in e-Rad is used for appropriate evaluation of R&D and development funded by the government and planning effective and efficient comprehensive strategies, and resource allocation policy, etc. at the science, technology and innovation administration.

For this reason, please use e-Rad to enter the R & D result information/accounting result information for each fiscal year related to the adopted issues and information on indirect expense execution results in regard to the competitive research expenses.

The necessary information for macro-analysis including R&D result information and accounting performance information will be provided to the Cabinet Office.

4.30 Registering researcher information to researchmap

In the JST-Mirai Program, we will ask you to submit your R&D plans and results reports through JST's research project management system (R3; R-Cube *1) that is linked to JST's researcher information database (researchmap *2). Researchers and collaborators selected for interview screening are required to register in the researchmap, so we recommend that you register early as soon as possible.

The information registered in researchmap is also effectively used for the purpose of research and statistical use in academic and S&T policy making by the national government. Please register in the researchmap and enter/update your achievement information, etc.

- *1 R3 (R-Cube) is an electronic application system for R&D plans and result reports that will be used by researchers who have been selected for JST-Mirai Program.
- *2 Researchmap (https://researchmap.jp/) is one of the largest researcher information databases in Japan, and registered achievement information can also be disclosed. In addition, researchmap works with e-Rad and faculty databases of many universities. The registered information can be used in other systems, so it also leads to efficiency by eliminating the repeated registration of same achievements in various application forms and databases.

Please refer to the "researchmap quick guide (new registration/login)" below for for registration status check, new registration, and reissuing of password.

https://researchmap.jp/outline/rr_manual/quickguide.pdf (Japanese version only)

In addition, please refer to the following "User's Manual/FAQ" for other operation methods such as how to register and edit your own achievements and output the registered achievement data.

https://guide.researchmap.jp/index.php/Researchmap (Japanese version only)

4.31 Patent application by JST

If an R&D institution does not acquire any rights for an invention, JST may acquire the rights. If the R&D institution does not intend to acquire rights for the invention, the researcher should convey the relevant information on the invention promptly to JST in any format. (The above "relevant information on the information required for JST to determine the applicability for patent,

such as a copy of the internal notification of the invention used in the R&D institution.)

JST conducts a review based on the information that has been received. If JST determines that it can make a patent application for the invention, the R&D institution and JST will separately conclude an agreement for transferring the patent right.

4.32 Securing research integrity at research institutes

In April, 2021, the government has decided the "Response policy in regarding to securing research integrity against new risks associated with internationalization and openness of research activities" (Japanese version only. Integrated Innovation Strategy Promotion Council on April 27, 2021). In this policy, it is pointed as "in order to promote the creation of science, technology and innovation in Japan, it is necessary to make open science in principle, and continue to promote international joint research with various partners strongly. At the same time, in recent years, due to new risks associated with the internationalization and openness of research activities, there are concerns that the fundamental values of the research environment, such as openness and transparency, may be undermined, and it has been pointed out that researchers are at risk of unintentional conflicts of interest and responsibility. Under these circumstances, it is indispensable for Japan to build an internationally reliable research environment in order to promote necessary international cooperation and exchanges while preserving the values that form the foundation of the research environment.".

At each R & D institution, based on the purpose of this policy, we would like to promote efforts to secure research integrity and ask you to inform the concerned parties.

In addition, we may check the status of securing research integrity of R & D institutions as necessary.

• Response policy in regarding to securing research integrity against new risks associated with internationalization and openness of research activities (Integrated Innovation Strategy Promotion Council on April 27, 2021)

Chapter 5 Submission via the Cross-ministerial R&D Management System (e-Rad)

5.1 Cross-ministerial R&D Management System (e-Rad)

The Cross-ministerial R&D Management System (e-Rad) is a cross-ministerial system that provides a series of on-line processes to manage the publicly funded research projects under the jurisdiction of ministries and agencies (Acceptance of applications \rightarrow Selection \rightarrow Adoption \rightarrow Management of adopted subject \rightarrow Registration of research results and accounting performance).

* The "e-Rad" is the abbreviation of the Cross-ministerial R&D Management System, which is created by adding the capital letter of "e" of "Electric" to the capital letters of "Research and Development" for science and technology.

5.2 Application method using e-Rad

R&D institutions are requested to make an application using e-Rad. For the application flow, refer to the procedure as follows.

(1) Pre-registration for using e-Rad

R&D institutions and researchers must be pre-registered before e-Rad can be used.

① Registration of R&D institution

An R&D institution needs to be registered to e-Rad by the time of application. An R&D institution is requested to appoint one administrative representative in charge of the e-Rad who download the form of R&D institution registration from the e-Rad portal site (hereinafter referred to as the "portal site") to apply for registration. (In case of a researcher who belongs to an R&D institution outside Japan or does not belong to any R&D institution, the researcher himself/herself shall apply.) Since registration takes several days, the research institute should perform the registration procedure more than two weeks before. Once the registration is completed, the research institute needs not to register the information again when applying for a program or project under the jurisdiction of other ministries or agencies. Similarly, if the research institute has already registered its information in a program or project under the jurisdiction of other ministry or agency, it need not register its information again.

For details of registration of the R&D institution and download of the form, visit the following website:

https://www.e-rad.go.jp/organ/entry.html (Japanese version only)

② Registration of researcher

The R&D institution must register information on researchers who conduct R&D, and issue a log-in ID and a password.

For the procedure to register researcher information, refer to the manuals, posted on the portal site, for the administrative representative of the R&D institution and for persons in charge of administrative work.

(2) Entry of application information in e-Rad

The researcher planned to make an application for the open invitation via e-Rad should refer to the operation manual for researchers on the following portal site:

https://www.e-rad.go.jp/en/manual/for_researcher.html

- <Notes>
- It is necessary to enter the application information on the web and attach the application form in case of applying. The maximum size of the application form file that can be uploaded is 3 MB. If you use image data in the file, please pay attention to the file size. In case of exceeding the maximum size, please contact 《kaikaku_mirai@jst.go.jp》 before uploading the file.
- ② The created application form file can only be uploaded in PDF format. e-Rad has a PDF conversion function for WORD and Ichitaro files. The use of these functions and software are not required for PDF conversion, please be sure to refer to the Researcher's Manual for usage and precautions if you use them.

(3) Other

An incomplete application form will not be subject to selection. Be sure to read "Application Guideline" and "Procedure for Preparing Proposal Forms" and then fill out the form carefully (Do not change the format of the application form). JST does not accept a request to replace or return the application form.

5.3 Others

(1) Operation of e-Rad

The operation manual of e-Rad can be viewed or downloaded from the portal site (https://www.e-rad.go.jp/en/). You must agree the terms of service before the operation.

(2) Where to direct questions on how to use the e-Rad system

Questions about the program itself are answered by staff of Department of R&D for Future Creation, JST. Questions about e-Rad operation methods are answered by e-Rad Help Desk. Before asking questions, be sure to read the website for the open call for this project and e-Rad Portal site carefully. **JST will not answer any questions regarding the status of the examination or acceptance.**
