# STI for the Transformation to Sustainability: Roadmaps for SDGs

**Nebojsa Nakicenovic**

Deputy Director General

International Institute for Applied Systems Analysis

Professor Emeritus of Energy Economics

Vienna University of Technology

*Expert Group Meeting on Science, Technology and Innovation,  
Organized by JST, UNDESA, WB, UNCTAD, Tokyo – 8-9 May 2018*

IIASA, International Institute for Applied Systems Analysis

## Collective Responsibility in the Anthropocene

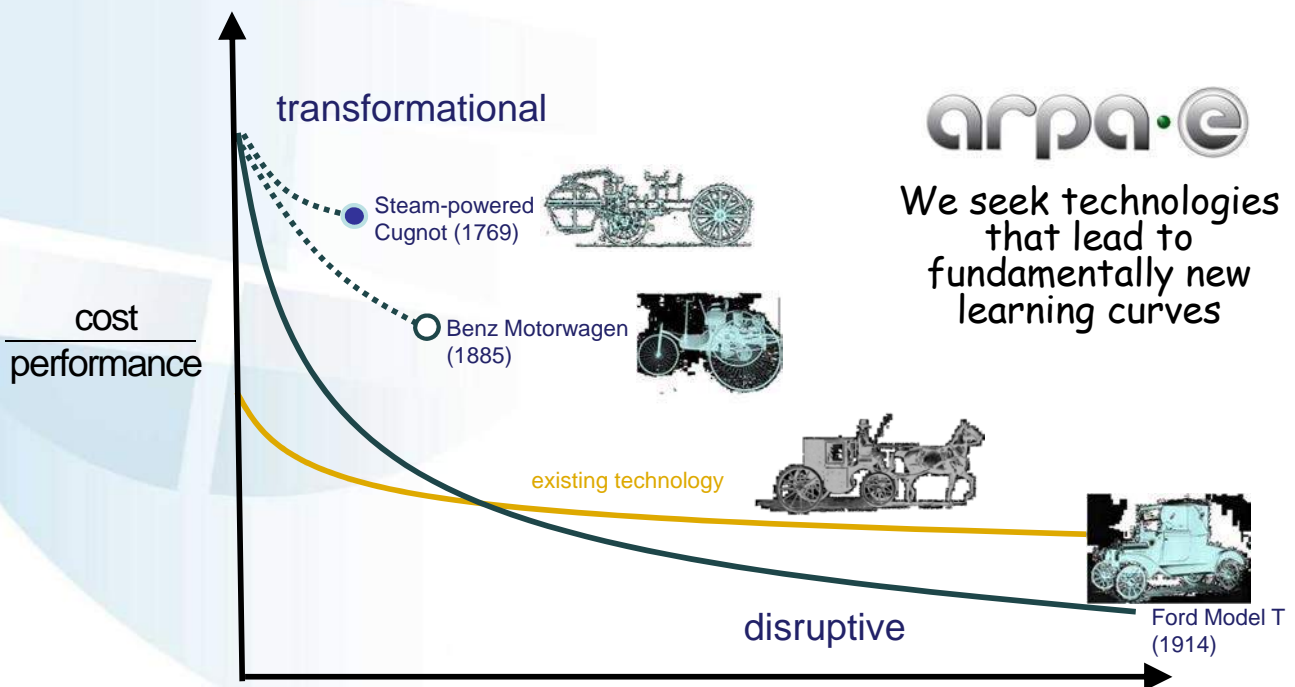

## Deep Uncertainties of STI

- ➔ Future advances and knowledge (e.g. inventions and innovations) not a function of time, but dependent on intervening actions (science funding & investments)
- ➔ Improvements through accumulation of experience (learning + knowledge appreciation)
- ➔ Interactive rather than linear process: Learning by doing and using; supply push and demand pull

# STI Transformational Change

## Dynamic, Cumulative, Systemic and Uncertain

- ➡ Incremental – gradual (continuous) and cumulative improvements
- ➡ Abrupt – radical, discontinuous and disruptive as “gales of creative destruction”
- ➡ Add as many mail-coaches as you please, you will never get a railroad by so doing. [Schumpeter, 1935/1951, 136]

# TWI2050 Major Transformations

## Technology Diffusion Compared digital revolution

# STI Policy Coherence

## ➔ Paradox of STI:

- cause of problems, e.g. as negative externalities
- but solution, if socially and environmentally sound

## ➔ Key to

- Understand inter-relationships, interdependencies and trade-offs
- Leverage **synergies** among STI policies and SDGs
- At all levels - global, national, regional and local

## ➔ Tools to support policy coherence:

- integrated assessments
- systems thinking
- roadmaps

# TWI2050 Report Outline

## Key Messages

## Synthesis

1. Framing and Introduction
2. Mega-transformations
3. Narrative and Overarching Goals
4. Sustainable Development Pathways
5. Governing the Great Transformation

TWI2050 Writing Meeting  
5-7 March 2018, IIASA
