

Center for Innovations for Disaster Risk Reduction and Management in Health (DRRM-H) in NCR and the Philippines

Dr. Carlos Primero D. Gundran, University of the Philippines Manila

Vision

- To fill in the gap in service delivery for Disaster Risk Reduction and Management in Health

Issue to solve

- Lack of service delivery support to identify available resources for disaster management
- Lack of mental health tools to identify evacuees requiring psychosocial interventions
- Lack of capacity building activities for communication, collaboration and application of incident command system for emergency responders and organizing site medical response

Technology features

- Web-based and Android-based application for tracking and mapping of resources during disaster response
- Mental health screening tool for service and resource allocation in evacuation camps
- Simulation training software and equipment to conduct realistic disaster trainings and exercises.

Possible implementation

- Industry: National and local government units involved in Disaster Risk Reduction and Management
Health sector
- Target users: National and local government officials
Emergency responders
Healthcare workers and students
Civilians
- Partnership: National government agencies
Local government units
Healthcare facilities
Universities/academic institutions
International organizations promoting disaster preparedness
